# Management's Discussion and Analysis For the three and nine-month periods ended September 30, 2021

Growing towards production with a substantial and sustainable stake in Canada's uranium pipeline

Leading the discovery of ethically sourced cobalt in Canada.

TSX: UEX

OTCQB: UEXCF

www.uexcorp.com

#### Message to Shareholders

In our second quarterly report of 2021, I indicated that the first half of this year had been a very good period for UEX and the uranium industry after a long decade of challenges. The past quarter has significantly built upon the positive momentum generated during the first half of the year.

In August, we closed the acquisition of JCU (Canada) Exploration Company, Limited ("JCU") and the sale of 50% of JCU to Denison Mines Corp. UEX successfully secured this acquisition at an average acquisition cost of 0.41/lb of 0.41/lb of 0.41/lb of 0.41/lb of U3O8 based upon JCU's historical resources, a substantial discount to the market valuations of Athabasca-sourced uranium resources. With the rapid rise in uranium prices this acquisition has become an increasingly attractive and accretive transaction for the Company over a very short period of time.

In early September, UEX raised \$21 million to fund our share of the purchase of JCU and retired our temporary loan to Denison. UEX now owns our 50% share of JCU free and clear of all obligations.

Uranium markets entered into a period of unprecedented volatility during the past quarter. The purchase of Uranium Participation Corp by Sprott and its re-christening as the Sprott Physical Uranium Trust ("SPUT") has led to a fundamental change in the supply-demand market dynamics for physical uranium. By securing a \$1.5 billion At-The-Market ("ATM") financing in mid-August for the purposes of purchasing spot uranium, SPUT's impact on the spot uranium market has been immediate and transformational. SPUT purchases have permanently removed several million pounds of surplus uranium from the market and spearheaded a change in nuclear utilities' long held perception that cheap and abundant uranium supply was unlimited and would persist for many years into the future. SPUT purchases have had a volatile impact on spot uranium prices, which reached US\$50/lb in the quarter, and more importantly led to a US\$10/lb increase in long-term uranium prices, a price level not seen for many years. SPUT's purchasing impact on uranium markets will likely affect uranium prices and continue to cause uranium market volatility for several months as SPUT continues to draw down their ATM and invest the proceeds into new spot uranium purchases. Sprott's purchasing has led to a tightening of uranium supply and has brought utilities back to the term uranium contract market. A healthy term market is seen by UEX to be the most important driver in returning the industry to a uranium market driven solely by fundamental forces and not by selfserving market perceptions.

This change in uranium markets has not gone unnoticed by investors. Many investors and funds that have avoided the uranium equity sector over the past decade have re-entered this investment space, and new uranium investors have emerged, leading to significant share price appreciation for UEX and other uranium developers and explorers.

With the acquisition of JCU, UEX now holds an ownership stake in 6 of the next 10 most likely to be developed uranium projects in Canada and is partnered with the industry's strongest uranium miners and developers. UEX is a unique investment opportunity within the uranium space. The Company has a substantial uranium resource base, with our resources all geographically located in Canada, a traditionally low-cost uranium production district. Our development projects are supported by the largest pipeline of uranium grassroots projects in the uranium junior sector and an enviable mid-stage and resource-level project portfolio that will allow our investors to remain exposed to growth through new deposit discoveries.

Such potential will allow UEX to grow into a long-term multi-sourced and sustainable uranium developer with excellent growth prospects.

With increased investor interest comes increased exploration and development activities for UEX in the coming year. We look forward to a very busy 2022 for the Company, with the increased exploration drilling at Christie Lake, Hidden Bay and on JCU-owned projects and ongoing feasibility study and ISR testing program at Wheeler River. This will enable the Company to seek new partners with solid funding to help us finance exploration work on our vast exploration portfolio.

Sincerely,

Roger Lemaitre
President & CEO

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

This Management's Discussion and Analysis ("MD&A") of UEX Corporation ("UEX" or the "Company") for the three and nine-month periods ended September 30, 2021 is intended to provide a detailed analysis of the Company's business and compares its financial results with those of previous periods. This MD&A is dated November 3, 2021 and should be read in conjunction with the Company's unaudited condensed interim consolidated financial statements and related notes for the three and nine-month periods ended September 30, 2021. The unaudited condensed interim consolidated financial statements are prepared in accordance with International Accounting Standard ("IAS") 34 Interim Financial Reporting, as issued by the International Accounting Standards Board ("IASB") and do not include all of the information required for full financial statements. This MD&A should also be read in conjunction with the audited annual consolidated financial statements for the years ended December 31, 2020 and 2019, prepared in accordance with International Financial Reporting Standards ("IFRS"), and the 2020 annual MD&A. Unless specified otherwise, all dollar amounts are in Canadian dollars.

Other disclosure documents of the Company, including its Annual Information Form, filed with the applicable securities regulatory authorities in Canada are available on SEDAR at <a href="https://www.sedar.com">www.sedar.com</a>.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

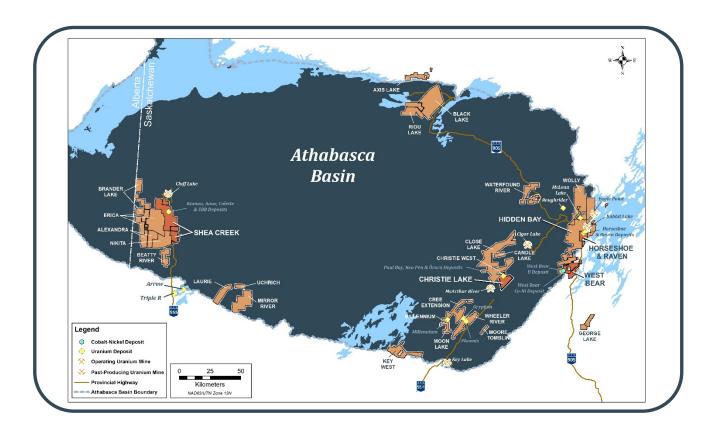

#### 1. Introduction

#### **Overview**

UEX is growing towards becoming a sustainable uranium developer with potential for multi-source low-cost production underpinned by a solid pipeline of lower risk growth opportunities. The Company also leads the discovery of ethically sourced cobalt in Canada.

Since being listed on the Toronto Stock Exchange in 2002, UEX has pursued exploration on a diversified portfolio of prospective uranium and cobalt projects in three areas within the Athabasca Basin in Saskatchewan, Canada. UEX has an ownership stake in several of Canada's key future uranium development projects, backstopped by development-stage projects at Horseshoe-Raven and Shea Creek. The Company's development pipeline is supported by an enviable and highly prospective portfolio of resource, mid-stage and grassroots projects including Christie Lake, Hidden Bay and West Bear which will help sustain UEX well into the future.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **UEX Directly-Owned Projects**

UEX is involved in a number of directly-owned uranium projects located in the Athabasca Basin, the world's richest uranium district. The Company's directly-owned uranium projects include:

- Five projects 100% owned and operated by UEX: Horseshoe-Raven, Hidden Bay, Riou Lake, Christie West, and Key West,
- Christie Lake, a joint venture project with JCU (Canada) Exploration Company Ltd. ("JCU"), which UEX has an 82.775% combined direct (UEX 65.5492%) and indirect (JCU 34.4508%) interest,
- Black Lake, a joint venture with Orano Canada Inc. ("Orano") and ALX Resources Corp ("ALX"), 51.426% owned and operated by UEX,
- Eight projects joint-ventured with and operated by Orano: Western Athabasca Joint Venture projects Shea Creek, Erica, Brander Lake, Alexandra, Nikita, Mirror River, Laurie and Uchrich,
- Beatty River, a joint-venture with Orano and JCU that is operated by Orano.

UEX is directly involved in three 100% owned cobalt-nickel exploration projects located in the Athabasca Basin of northern Saskatchewan. The flagship cobalt-nickel project is West Bear, which was formerly part of UEX's Hidden Bay Project and contains the West Bear Cobalt-Nickel Deposit and the West Bear Uranium Deposit. The other cobalt-nickel projects are the Axis Lake and Key West Projects.

Since inception, UEX has been successfully discovering and advancing uranium resources in the Athabasca Basin. The Company has three 100% owned uranium deposits in the eastern Athabasca Basin (Horseshoe, Raven, and West Bear), three 65.55% directly owned uranium deposits joint-ventured with JCU (Ken Pen, Paul Bay, and Ōrora, which are part of the Christie Lake Project), and a 49.1% interest in four uranium deposits joint-ventured with Orano in the western Athabasca Basin.

<sup>(1)</sup> The mineral resource estimates follow the requirements of National Instrument 43-101 – Standards of Disclosure for Mineral Projects and classifications follow CIM definition standards.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

- (2) The Shea Creek mineral resources were estimated at a cut-off of 0.30% U₃O₃, and are documented in the technical report titled "Technical Report on the Shea Creek Property, Northern Saskatchewan, with an Updated Mineral Resource Estimate" (the "Shea Creek Technical Report") with an effective date of May 31, 2013 which was filed on SEDAR at www.sedar.com on May 31, 2013.
- (3) Certain amounts presented in the Shea Creek Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.
- (4) The Horseshoe, Raven, and West Bear mineral resources were estimated at a cut off of 0.05% U₃O₀, and are documented in the "Preliminary Assessment Technical Report on the Horseshoe and Raven Deposits, Hidden Bay Project, Saskatchewan, Canada" (the "Horseshoe-Raven Technical Report") with an effective date of February 15, 2011 which was filed on SEDAR at www.sedar.com on February 23, 2011.
- (5) Certain amounts presented in the Horseshoe-Raven Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.
- (6) The Christie Lake mineral resources were estimated at a cut off of 0.2% U₃O₀, and are documented in the "Technical Report on the Christie Lake Uranium Project, Saskatchewan, Canada" (the "Christie Lake Technical Report") with an effective date of December 13, 2018 which was filed on SEDAR at www.sedar.com on February 1, 2019. Inferred resources have been modified from the stated values in the Christie Lake Technical Report to reflect UEX's increase in the ownership of Christie Lake Project from 60% to 65.5492%% effective January 1, 2021.
- (7) Certain amounts presented in the Christie Lake Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.

On April 15, 2020, UEX announced an updated cobalt and nickel resource estimate at the West Bear Cobalt-Nickel Deposit located on the Company's 100% owned West Bear Project. The cobalt and nickel resources are summarized in the table below:

## Mineral Resource Statement, West Bear Cobalt-Nickel Deposit, Saskatchewan, UEX Corporation, December 31, 2019 (1)(2)(3)

		Gra	de	Containe	d Metal
Category	Quantity Tonnes	Cobalt %	Nickel %	Cobalt (lb)	Nickel (lb)
Indicated	1,223,000	0.19	0.21	5,122,000	5,662,000

- (1) The mineral resource estimates follow the requirements of National Instrument 43-101 Standards of Disclosure for Mineral Projects and classifications follow CIM definition standards.
- (2) The West Bear Cobalt-Nickel Deposit mineral resources were estimated at a cut off of 0.023% Cobalt equivalent and are documented in the "2019 Technical Report on the West Bear Project, Saskatchewan, Canada" (the "West Bear Technical Report") with an effective date of December 31, 2019 which was filed on SEDAR at www.sedar.com on April 30, 2020.
- (3) Certain amounts presented in the West Bear Cobalt-Nickel Deposit Mineral Resource Statement outlined in the UEX News Release of April 15, 2020 have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.

Mineral resources that are not mineral reserves have not demonstrated economic viability. Further information on each of these deposits and the mineral resource estimates presented above is available under the Christie Lake, Western Athabasca Projects – Shea Creek, Horseshoe-Raven and West Bear sections of this MD&A.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **UEX Indirectly-Owned Projects through JCU**

On August 3, 2021, UEX acquired 100% of the shares of JCU from Overseas Uranium Resources Development Co., Ltd. for \$41 million, pursuant to a definitive purchase agreement signed on April 22, 2021 and further amended on June 14, 2021.

On August 3, 2021 UEX sold 50% of the JCU shares to Denison for \$20.5 million, and entered into a shareholders' agreement governing the management of JCU (the "Shareholders' Agreement"). UEX will be the manager of JCU as long as Denison does not own more than 50% of the shares of JCU.

JCU is a private Canadian company engaged in the exploration and development of uranium assets in Canada. It has partnerships and interests in 12 uranium exploration and development projects in the Athabasca Basin and Nunavut, including ownership interests in Denison's Wheeler River Project (10.0000%), Cameco's Millennium Project (33.0990%), Orano's Kiggavik Project (33.8123%), and UEX's Christie Lake Project (34.4508%).

JCU has historical indicated and inferred resources as shown in the table below. Other than the Christie Lake resource estimate, these are historical resource estimates taken from the sources listed below. A qualified person has not done sufficient work to classify these historical estimates as current mineral resources. The Company is not treating this information as current mineral resources, has not verified this information and is not relying on it. The Company currently does not plan to conduct any work to verify the historical estimates other than using them to guide its exploratory and possible development work.

#### Historic Indicated and Inferred Resources - JCU Projects

Subtotal - JCU Projects					79,087,041	39,543,520				17,849,257	8,924,629

- (1) The Christie Lake mineral resources were estimated at a cut off of 0.2% U₃O<sub>8</sub> and are documented in the "Technical Report on the Christie Lake Uranium Project, Saskatchewan, Canada" (the "Christie Lake Technical Report") with an effective date of December 13, 2018 which was filed on SEDAR at www.sedar.com on February 1, 2019. Inferred resources have been modified from the stated values in the Christie Lake Technical Report to reflect UEX's increase in the ownership of Christie Lake Project from 60% to 65.5492% effective January 1, 2021.
- (2) Certain amounts presented in the Christie Lake Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.
- (3) Wheeler River resources as reported by Denison's Prefeasibility Study as posted on October 30, 2018 on SEDAR.com using a cut-off grade of 0.2% U308 for the Gryphon Deposit and 0.8% U308 for the Phoenix Deposit. These are treated by the Company as historic resource estimates.
- (4) Millennium resources as reported by Cameco on their website at <a href="https://www.cameco.com/businesses/uranium-projects/millennium/reserves-resources#measured\_and\_indicated">https://www.cameco.com/businesses/uranium-projects/millennium/reserves-resources#measured\_and\_indicated</a> as of December 31, 2020. Cut-off grades used to estimate resources are unknown. The reader is cautioned that UEX is not aware whether Cameco's reporting of resources conforms to NI 43-101 and CIM guidelines. These are treated by the Company as historic resource estimates.
- (5) Kiggavik resources as reported by Orano in their 2019 Activities Report available on their website at <a href="https://www.orano.group/docs/default-source/orano-doc/finance/publications-financieres-et-reglementees/2019/orano-2019-annual-activity report.pdf?sfvrsn=2abbc744-8">https://www.orano.group/docs/default-source/orano-doc/finance/publications-financieres-et-reglementees/2019/orano-2019-annual-activity report.pdf?sfvrsn=2abbc744-8</a> and converted from tonnes U to pounds U<sub>3</sub>O<sub>8</sub> and from %U to %U<sub>3</sub>O<sub>8</sub>. Cut-off grades used to estimate resources are unknown. The reader is cautioned that UEX is not aware whether Orano's reporting of resources conforms to NI 43-101 and CIM guidelines. These are treated by the Company as historic resource estimates.
- (6) UEX ownership of JCU resources listed are based on becoming 50% owner of JCU upon closing of the transaction with OURD on or before August 3, 2021.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

UEX is indirectly involved in twelve uranium projects located in the Athabasca Basin, and the Thelon Basin of the Nunavut Territory through its 50% ownership of JCU. JCU owns:

Project	JCU share (%) <sup>(1)</sup>	Partners (%) * Operator	
Millennium	30.0990	Cameco Corporation*	69.9010
Kiggavik	33.8123	Orano Canada Inc.*	24.0033
		Urangesellschaft Canada Ltd.	42.1844
Wheeler River	10.0000	Denison Mines Corp.*	90.0000
Christie Lake	34.4508	UEX Corporation*	65.5492
Wolly	13.1077	Orano Canada Inc.*	64.9997
		Denison Mines Corp.	21.8926
Close Lake	10.3128	Orano Canada Inc.*	75.1279
		Cameco Corporation	14.5593
Candle Lake	25.0000	Denison Mines Corp.*	44.9400
		Uranium One	30.0600
Beatty River	21.4253	Orano Canada Inc.*	56.5303
		UEX Corporation	22.0444
Waterfound River	26.9830	Orano Canada Inc.*	60.7008
		Denison Mines Corp.	12.3162
Cree Extension	30.0990	Cameco Corporation*	41.9645
		Orano Canada Inc.	27.9365
Moon Lake	20.1494	Cameco Corporation*	56.6816
		Orano Canada Inc.	23.1690
Moore Tomblin	13.5947	Orano Canada Inc.*	66.6194
		Cameco Corporation	19.7859

<sup>(1)</sup> As 50% owner of JCU, UEX will have an indirect 50% interest in the JCU Projects

#### **Growth Strategy – UEX**

- To plan and execute the exploration and evaluation work required to delineate and develop economic uranium resources at Christie Lake and our 100%-owned Hidden Bay Project.
- To grow resources through brownfield exploration as well as advancing the evaluation/development activities at Shea Creek.
- To contribute to the advancement of the Wheeler River to production through our 50% ownership in JCU.
- To advance the Millennium, Horseshoe-Raven and Kiggavik uranium deposits to a production decision once uranium prices have demonstrated a sustained recovery from current spot and long-term prices.
- To find new uranium deposits at the Western Athabasca Projects with our joint-venture partner Orano.
- To extract value for UEX shareholders from our cobalt assets using our unique knowledge and understanding of the Athabasca cobalt deposits to take advantage of the rapid increase in the demand for cobalt due to the anticipated growth in electric vehicle manufacturing.
- To evaluate and make timely acquisitions of uranium and cobalt projects in favorable, low-cost jurisdictions.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

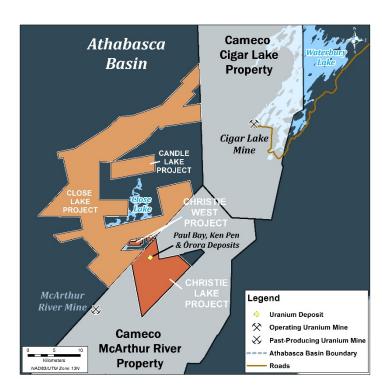

## 2. Exploration and Evaluation Update

The following is a general discussion of UEX's recent exploration and evaluation activities. For more detailed information regarding UEX's exploration projects, please refer to UEX's current Annual Information Form, available at <a href="https://www.sedar.com">www.sedar.com</a> or at <a href="https://www.sedar.com">www.uexcorp.com</a>.

### **Christie Lake Project**

On December 19, 2018, UEX announced the results of the maiden uranium resource estimate for the Christie Lake Property pursuant to the requirements of National Instrument 43-101 "Standards for Disclosure for Mineral Projects" ("NI 43-101"). UEX announced the filing of the technical report supporting the mineral resource on February 1, 2019.

The Christie Lake Project is currently estimated to contain 588,000 tonnes grading  $1.57\%~U_3O_8$ , which equates to 20.35 million pounds of  $U_3O_8$  using a cut-off grade of  $0.2\%~U_3O_8$ . Please see the Mineral Resources section below for more information regarding the Christie Lake Mineral Resources.

#### **Mineral Resources**

Deposit	Cut-Off Grade (% U₃O₅)	Tonnage (t)	Resources (million lbs U <sub>3</sub> O <sub>8</sub> )	Average Grade (% U₃O <sub>8</sub> )
Paul Bay Deposit	0.2	338,000	13.49	1.81
Ken Pen Deposit	0.2	149,000	3.44	1.05
Ōrora Deposit	0.2	102,000	3.41	1.53
Total		588,000	20.35	1.57

- (1) Mineral resources are not mineral reserves and have not demonstrated economic viability.
- (2) The Christie Lake mineral resources were estimated at a cut off of 0.2% U₃O₃ and are documented in the Christie Lake Technical Report.
- (3) Certain amounts presented in the Christie Lake Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.

	Number of claims	Hectares	Acres	UEX Direct Ownership %
Christie Lake	6	7,922	19,576	65.55

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

The Christie Lake Project is currently 65.55% owned by UEX and 34.45% owned by JCU, thus UEX owns a 82.78% combined direct and indirect interest in the Project. The Company signed the Christie Lake Option Agreement ("Option Agreement") in 2016, to earn up to a 70% interest in the project by making cash payments of \$7.0 million and funding \$15.0 million in exploration work commitments over 5 years.

On November 16, 2018, UEX informed JCU that the Company had completed a total of \$6 million in cumulative cash payments and funded over \$10 million in exploration work commitments to vest a 60% interest in the Project.

UEX elected to terminate the Option Agreement which was thereby replaced by the Christie Lake Joint Venture Agreement. UEX and JCU signed the Joint Venture Agreement on July 15, 2016 which sets the terms and conditions that will govern all decisions related to the exploration, development and any future mining production from the Christie Lake Project.

When JCU elected not to participate in funding the approved 2020 exploration program on the Project, UEX's direct interest in the Project increased to 65.55% effective December 31, 2020.

UEX believes that the P2 Fault trend that hosts the McArthur River Mine may continue onto the Christie Lake Project. Beyond the known mineralized zones, management believes that the full potential of this productive corridor has only begun to be understood and that it holds very good potential for the discovery of new uranium deposits and expansion of the historical resources. This belief has been bolstered by the discovery of the Ōrora Zone in January 2017, located 500 metres (m) northeast and along strike of the Ken Pen Deposit, and in 2019 by the discovery of an offsetting fault containing strong hydrothermal alteration and geochemical uranium enrichment immediately northeast of the Ōrora Zone. Also encouraging is the discovery of new uranium mineralization southwest of the Paul Bay Deposit. The southern half of the property hosts many kilometres of prospective electromagnetic (EM) conductors that have never been drill tested, which is unusual for the eastern Athabasca Basin at depths of less than 500 m. These conductors provide UEX with excellent greenfields exploration potential proximal to producing uranium mines.

Further information on the geology of the Christie Lake Project is documented in the Christie Lake Technical Report as prepared by SRK Consulting (Canada) Inc. by Dr. Aleksandr Mitrofanov, P.Geo., supported by Dr. David Machuca, P.Eng., and Mr. Glen Cole, P.Geo. of SRK Consulting (Canada) Inc., (each of whom is an independent "Qualified Person" for the purposes of NI 43-101) and by Mr. Christopher Hamel, P.Geo., Exploration Manager of UEX Corporation (who is a non-independent "Qualified Person"). The Christie Lake Technical Report is dated February 1, 2019 and has an effective date of December 13, 2018 and is available on the Company's website at <a href="https://www.uexcorp.com">www.uexcorp.com</a> and on SEDAR at <a href="https://www.sedar.com">www.sedar.com</a>.

#### **2020 Exploration Program**

UEX completed approximately \$0.98 million in exploration activities on the Christie Lake Project in 2020. The exploration program was comprised of a 54.6 line-km of fixed-loop time domain electromagnetic survey and a summer drill program of 4 holes (CB-149 to CB-152) totaling 2,186 m. The geophysical survey focused on the Yalowega Trend to better locate the Christie Lake A, B, and C conductors. The drill program targeted the new conductor locations from the 2020 geophysical survey in the Ōrora North area coincident with anomalies from the 2019 Resistivity survey.

The 2020 electromagnetic survey successfully defined conductors coincident with the resistivity low from the 2019 resistivity survey in the Ōrora North area. On L69N drill hole CB-149 tested a newly defined conductor and intersected anomalous structure and alteration associated with the cross-cutting fault that was first encountered during the 2019 drill program. Drill holes CB-150 and CB-151 tested the coincident resistivity and conductivity anomalies on L79N and encountered strong hydrothermal clay alteration within a fault zone in the basal sandstone. The basal sandstone contained anomalous uranium geochemistry with the lowermost 29 m of the

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

sandstone column containing 2 ppm U within a fault breccia. The presence of the strong alteration, structure, and uranium geochemical enrichment in CB-150 and CB-151 are considered a very positive development that warrants additional drill testing. Drill hole CB-152 drilled northeast of the Ōrora Deposit, targeting the intersection of structure in the basement to test for uranium mineralization with similar controls as observed at the Paul Bay Deposit on L70N.

A cross-cutting east-north-easterly fault was identified north of the Ōrora Deposit in holes CB-150 and CB-151. The presence of these ENE striking faults is considered an important feature in the genesis of the known deposits on the Project and can be used to assist in selecting targets for future drill programs.

#### **2021 Exploration Program Plans**

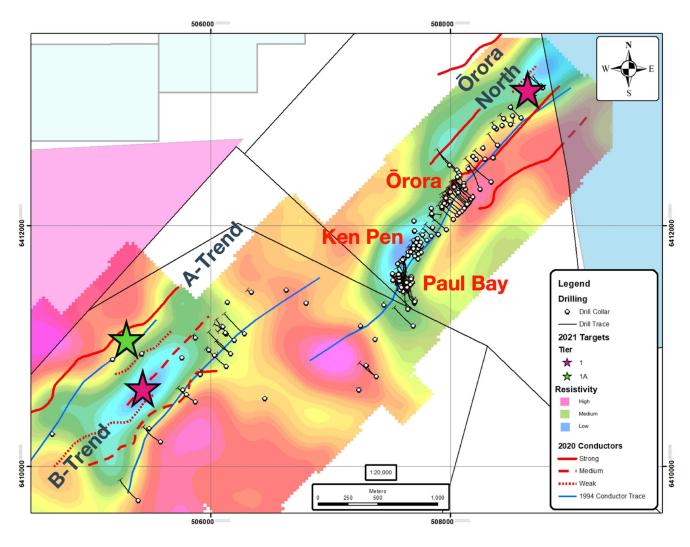

In November 2020, the Joint Venture approved the 2021 exploration program and budget totaling \$2 million to focus on multiple targets along the Yalowega conductive trend and to follow up drill results from the 2020 program. Contractor availability impacted the program and limited the scope of the program to three drill holes before forcing demobilization of the drill program. UEX estimates the actual 2021 exploration expenditures at Christie Lake will be approximately \$0.75 million. UEX is still compiling and interpreting the data collected during the 2021 program.

Per the Christie Lake Joint Venture Agreement, JCU has changed it decision to participate in the 2021 program and will be contributing its share of the 2021 expenditures for the program.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

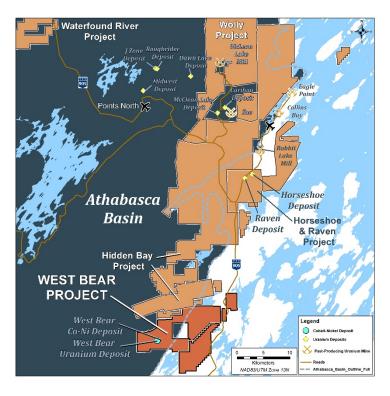

## Target Areas – 2021 Christie Lake Exploration Program

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

#### **West Bear Project**

#### **West Bear Cobalt-Nickel Deposit**

- •An updated resource estimate at the West Bear Co-Ni Deposit was announced in April 2020 at 1,223,000 tonnes at 0.19% Co and 0.21% Ni for contained metal of 5,122,000 lbs cobalt and 5,662,000 lbs nickel over a strike length of 600 m and at depths from 30 120 m.
- •In 2020 UEX completed 13 holes totaling 1,314 m testing the Umpherville Prospect area approximately 2 km north of the West Bear Co-Ni Deposit. Geophysics was initiated in the fall of 2020 and was completed in March in advance of the 2021 drill program.
- •The 2021 drill program was completed in March 2021 and consisted of 19 drill holes totalling 2,690 m. The drilling identified new cobalt-nickel mineralization at Michael Lake approximately 7 km east of the West Bear Co-Ni Deposit. The discovery hole, MIC-004 graded 0.50% Co and 0.94% Ni over 23.5 metres.

#### **West Bear Uranium Deposit**

- Shallowest undeveloped uranium deposit in the Athabasca Basin
- Near existing milling infrastructure and power lines
- Short distance from year-round all-weather access by commercial airport and via Provincial Highway 905

	Number of claims	Hectares	Acres	UEX Ownership %
West Bear	27	11,103	27,437	100.00

The West Bear property lands are 100% owned by UEX with the exception of Mineral Lease 5424 which is a joint venture between UEX (77.961%), Empresa Nacional Del Uranio S.A. (7.548%), Nordostschweizerische Kraftwerke A.G. (7.548%) and Encana (6.944%). West Bear was acquired from Cameco upon UEX's formation in 2001 as part of the Hidden Bay Project, which established Cameco's initial equity position in UEX. All existing and known uranium and cobalt-nickel resources reported in UEX's resource estimates occur within mineral claims owned 100% by the Company.

UEX has elected to separate West Bear from the Hidden Bay Project due to its advanced stage of exploration and development compared to the remainder of the original project lands and due to the fact that future exploration focus will be on expanding cobalt-nickel resources instead of uranium resources. The West Bear Uranium Deposit is located on the West Bear Project and has uranium resources that have been subject to advanced studies including a Preliminary Feasibility Study (<a href="https://uexcorp.com/projects/west-bear/">https://uexcorp.com/projects/west-bear/</a>).

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Mineral Resource Estimates**

For details of the West Bear Resource estimate for the West Bear Uranium Deposit, please see the next section, Mineral Resource Estimates, Horseshoe and Raven Project, as the uranium resources at the West Bear Uranium Deposit were estimated as part of the Horseshoe-Raven Technical Report.

The West Bear Co-Ni Deposit resource estimate was outlined in the UEX news release of April 15, 2020 prepared internally by UEX's exploration team comprised of Mr. Nathan Barsi, P.Geo., Mr. Chris Hamel, P.Geo., and Mr. Trevor Perkins, P.Geo. in accordance with NI 43-101. Mr. Barsi, Mr. Hamel, and Mr. Perkins were employees of UEX Corporation at the time the report was issued and are Qualified Persons as defined by NI 43-101. Details for the mineral resource estimates at a cut-off grade of 0.023% cobalt equivalent grades ("CoEq") are as follows:

#### Mineral Resource Statement, West Bear Cobalt-Nickel Deposit, Saskatchewan,

UEX Corporation, December 31, 2019 (1)(2)(3)

		Gra	de	Containe	d Metal
Category	Quantity	Cobalt Nickel		Cobalt	Nickel
	Tonnes	%	%	(lb)	(lb)
Indicated	1,223,000	0.19	0.21	5,122,000	5,662,000

- (1) The mineral resource estimates follow the requirements of NI 43-101 and classifications follow CIM definition standards.
- (2) The West Bear Cobalt-Nickel Deposit mineral resources were estimated at a cut off of 0.023% Cobalt equivalent and are documented in the "2019 Technical Report on the West Bear Project, Saskatchewan, Canada" (the "West Bear Technical Report") with an effective date of December 31, 2019 which was filed on SEDAR at www.sedar.com on April 30, 2020.
- (3) Certain amounts presented in the West Bear Cobalt-Nickel Deposit Mineral Resource Statement outlined in the UEX News Release of April 15, 2020 have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.

#### **Historical Work**

In addition to the West Bear Co-Ni Deposit, the property hosts one uranium deposit and several occurrences and showings, including the West Bear Uranium Deposit ("WBU Deposit"), the Michael Lake Co-Ni Occurrence, the Pebble Hill Uranium Occurrence, the Mitchel Lake Uranium Occurrences, and the Umpherville Uranium Occurrence. The WBU Deposit has been the subject of several NI 43-101 resource reports and a pre-feasibility study commissioned by UEX (https://uexcorp.com/projects/west-bear/).

The WBU Deposit has been defined over a strike length of 530 m, ranges in width between 20 m and 70 m, ranges in thickness from 0.1 m to over 15 m and is located at vertical depths between 15 m to 35 m. The WBU Deposit is a classic cigar-shaped body similar to the Cigar Lake and McClean Lake deposits and is hosted at and above the intersection of faulted graphitic metapelites at the unconformity with the overlying Athabasca Group sandstone. For more details of the WBU Deposit including an estimate of the contained resources, please review the latest technical report filed on SEDAR and on our website accessible from this link: <a href="https://uexcorp.com/projects/west-bear/">https://uexcorp.com/projects/west-bear/</a>.

#### **2020 Exploration Program**

In February and March, UEX completed 13 drill holes totalling 1,314 metres that tested a historical area of hydrothermal alteration and anomalous uranium and nickel concentrations in the Umpherville Prospect area. The Umpherville Prospect is located approximately 2 kilometres north of the West Bear Co-Ni Deposit and was identified as a high priority target area based upon geological and structural similarities to the area hosting the

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

West Bear Co-Ni Deposit, and includes a historical 1977 drill hole ML-77-05 which intersected 0.22% eU<sub>3</sub>O<sub>8</sub> over 4 feet (1.22 metres).

The winter drill program was successful in locating and intersecting the North Rim fault structure coincident with the West Bear Graphitic Package at the unconformity at depths averaging approximately 45 metres. The program substantially expanded the size of the known hydrothermal alteration system within the Athabasca sandstone from approximately 600 metres to a strike length of approximately 1,500 metres. The alteration zone is enriched in uranium with values ranging from 2 ppm U to 13 ppm U, which are concentration levels often observed proximal to many Athabasca unconformity uranium deposits and the nearby West Bear Co-Ni Deposit. The alteration system remains open along strike to the northeast and for 2 kilometres to the southwest in the direction of UEX's North Shore Uranium Occurrence where several historical holes have intersected unconformity-related uranium and nickel.

The Company issued an updated Technical Report which included an increase in the resource estimate to incorporate the results of the 2019 West Bear Property exploration program which was filed on SEDAR.com on April 30, 2020.

In November 2020, as part of the approved 2021 exploration program, the Company initiated a geophysical program in the Michael Lake and Huggins Lake target areas. A total of 47 line-km of Horizontal Loop Electromagnetic Surveying was completed in the Michael Lake target area and 36 km in the Huggins Lake target area. This work is designed to re-locate prospective sections of the West Bear Graphitic Package along the north and eastern rims of the West Bear Dome in areas where core review and desktop study indicate a 4.2 km-long nickel in glacial till anomaly at Michael Lake, and open alteration in the basement below uranium and nickel geochemical anomalies in the Huggins Lake target area. The cost of the fall geophysical program was \$0.22 million.

#### **2021 Exploration Program**

In January to March of 2021, UEX completed a field program that completed the HLEM geophysics on the Michael Lake and Huggins Lake grids, which was initiated in the fall of 2020, and drilled 19 holes totalling 2,690 m to test the Michael Lake target area. The drill program was successful at locating a new zone of cobalt-nickel mineralization on the Michael Lake Grid. Discovery hole MIC-004 returned an average grade of 0.50% Co and 1.01% Ni over 23.5 m from 44.0 m. Several follow up drill holes also encountered cobalt-nickel mineralization.

The West Bear drill program tested the Michael Lake conductor with 19 drill holes along the eastern margin of the West Bear Dome. Michael Lake drilling focused on testing faulted graphitic along a 4.2 km-long nickel-in-overburden anomaly define by historical reverse circulation holes completed in the 1980's. Due to the successful drill program at Michael Lake, the planned drill testing of the Huggins Lake target was deferred until a future date.

#### Claim Staking

In June 2020, UEX acquired two claims totaling 491 ha by staking immediately east of and adjacent to West Bear that have now been incorporated into the Property.

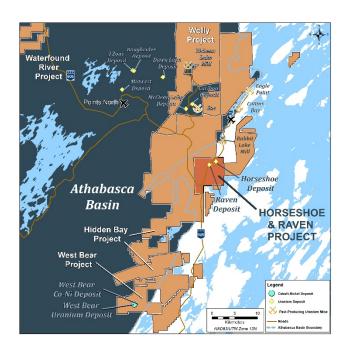

In February 2021, UEX acquired one claim totaling 2,629 ha by staking immediately south and adjacent to West Bear that has now been incorporated into the Property.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

## **Horseshoe and Raven Project**

- Two known deposits: Horseshoe and Raven.
- Proximal to uranium mills, year-round access by road and air, electric transmission lines transect the property.
- Two of the shallowest deposits in the Athabasca Basin ranging from 50 – 450 m depth exclusively hosted in competent basement rocks with no sandstone cover and can be mined using conventional hard rock mining techniques.
- A 2016 metallurgical study indicates the deposits could be amenable to heap leach extraction. A subsequent scoping study returned a positive viability for a heap leaping operation.

	Number of claims	Hectares	Acres	UEX Ownership %
Horseshoe & Raven	1	4,486	11,085	100.00

The Horseshoe and Raven Project ("Horseshoe-Raven") was acquired from Cameco upon UEX's formation in 2001 as part of the Hidden Bay Project. UEX has elected to separate Horseshoe-Raven from the Hidden Bay Project due to its advanced stage of exploration and development compared to the remainder of the original project lands. Horseshoe-Raven has significant uranium resources that have been subject to advanced studies including the Horseshoe-Raven Technical Report and a heap leach scoping study.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Horseshoe and Raven Deposits**

- In 2011, the Horseshoe-Raven Technical Report was completed using a commodity price of US\$60/lb U₃O<sub>8</sub> – see discussion below.
- Very shallow undeveloped uranium resource in the Athabasca Basin amenable to conventional mining techniques.
- Located 4 km from Cameco's Rabbit Lake Mill and 22 km from Orano's McClean Lake Mill.
- Existing power line supplying Rabbit Lake Mill crosses over the deposits.
- Year-round all-weather access by commercial airport and via Provincial Highway 905.
- In December 2016, a scoping study of the Horseshoe and Raven Deposits that considered heap leach
  extraction was completed. The objective of the study was to determine whether heap leach processing
  was as economically viable as the conventional tank leach process considered in the 2011 HorseshoeRaven Technical Report. The results of the scoping study were positive and further investigation is
  warranted.

#### **Mineral Resource Estimates**

The current technical report, "Preliminary Assessment Technical Report on the Horseshoe and Raven Deposits, Hidden Bay Project, Saskatchewan, Canada" (the "Horseshoe-Raven Technical Report"), prepared by SRK Consulting (Canada) Inc. ("SRK Consulting") and G. Doerksen, P.Eng., L. Melis, P.Eng., M. Liskowich, P.Geo., B. Murphy, FSAIMM, K. Palmer, P.Geo. and Dino Pilotto, P.Eng., with an effective date of February 15, 2011 was filed on SEDAR at www.sedar.com on February 23, 2011. Details for the mineral resource estimates at a cut-off grade of 0.05% U<sub>3</sub>O<sub>8</sub> are as follows:

Deposit		Tonnes	Grade U₃O <sub>8</sub> (%)	U₃O <sub>8</sub> (lbs)		Tonnes	Grade U₃O₃ (%)	U₃O <sub>8</sub> (lbs)
Horseshoe		5,119,700	0.203	22,895,000		287,000	0.166	1,049,000
Raven	la dia ata d	5,173,900	0.107	12,149,000	l£	822,200	0.092	1,666,000
West Bear <sup>(1)</sup>	Indicated	78,900	0.908	1,579,000	Inferred	1	-	-
TOTAL <sup>(2)</sup>		10,372,500	0.160	36,623,000		1,109,200	0.111	2,715,000

<sup>(1)</sup> Mineral resource estimates for the West Bear Deposit are located on the Hidden Bay Project but are included in this table as they were estimated, evaluated, and included within the Horseshoe-Raven Technical Report.

<sup>(2)</sup> The mineral resource estimates follow the requirements of NI 43-101 and classifications follow CIM definition standards.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

The Horseshoe-Raven Technical Report found the economics of mining the Horseshoe and Raven deposits to be positive and, based on a spot price of US\$60 per pound of U<sub>3</sub>O<sub>8</sub>, reported undiscounted earnings before interest and taxes ("EBIT") of \$246 million, a pre-tax net present value ("NPV") at a 5% discount rate of \$163 million and an internal rate of return ("IRR") of 42%. The Horseshoe-Raven Technical Report is preliminary in nature and includes inferred mineral resources that are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. There is no certainty that the preliminary economic assessment will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Projects in the mining sector have experienced rising costs, including rising capital and operating costs, during the past few years. The price of uranium has declined since the date of the Horseshoe-Raven Technical Report which could negatively impact the results of the Horseshoe-Raven Technical Report. Projects in the mining sector have also experienced significant fluctuations in costs, which could impact EBIT, NPV and IRR which have been calculated based upon historical costs. Accordingly, readers should bear these factors in mind when reading the Horseshoe-Raven Technical Report and should not place undue reliance on the Horseshoe-Raven Technical Report.

#### Heap Leach Potential

In July 2016, UEX contracted SGS Lakefield Laboratories to undertake a metallurgical study of mineralization from the Raven and Horseshoe Deposits. The study consisted of two columns crushed to both 12.7 millimetres (mm) and 6.35 mm and one column was loaded with the 2011 test material crushed to 6.35 mm.

The column leach tests averaged 98% uranium recovery over a 60-day leaching period and for the newly collected material crushed to 12.7 mm 95% recovery was achieved after 28 days of testing. We believe that the results of the column leaching test program demonstrate that the Horseshoe and Raven Deposits are promising candidates for heap leach uranium processing. Following the column leach tests, a scoping study of the project incorporating heap leaching was undertaken. The Company was pleased with the findings of this study and will be contemplating the next steps of the development process recognizing that higher uranium prices will be required to order to make the project economically viable.

#### **2021 Exploration Program**

In August and September, UEX initiated a geological review of the Horseshoe and Raven Deposits with the intention of completing an updated mineral resource estimate of the two deposits.

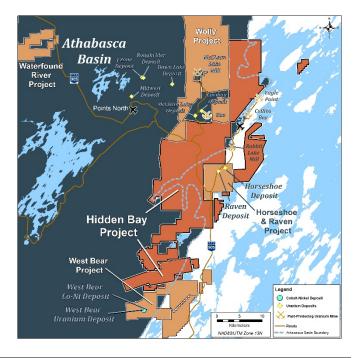

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

#### **Hidden Bay Project**

Hidden Bay was acquired from Cameco upon UEX's formation in 2001 establishing Cameco's initial equity position in UEX. The Hidden Bay Project includes the Tent-Seal, McClean South, Rabbit West, Wolf Lake, Rhino, and Dwyer target areas.

The Hidden Bay Property originally included the Horseshoe-Raven and West Bear Projects, which were separated from the Hidden Bay Project due to those projects more advanced stage of exploration and development and, in the case of West Bear, the focus on cobalt as an exploration target.

	Number of claims	Hectares	Acres	UEX Ownership %
Hidden Bay	46	51,847	126,933	100.00

#### **Basement Targeting at Hidden Bay**

Work completed between 2015 and 2019 has confirmed that previous operators on the Hidden Bay Project focused primarily on testing unconformity targets with little effort expended on testing basement targets at depths below the unconformity where deposits such as Millennium, Gryphon and Roughrider were discovered. In the western half of the Hidden Bay property where Athabasca sandstone cover is present, less than 25% of the historical drilling extended deep enough below the unconformity to test for basement uranium mineralization potential.

UEX's existing unconformity-focused exploration database confers a substantial competitive advantage, as it can be used to generate high-quality basement targets with limited capital outlay. Substantial investment in geophysics, prospecting and drilling would be required to obtain a fraction of the information that UEX already possesses and is using to vector toward basement-hosted deposits.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **2020 Exploration Program**

UEX did not undertake field activities on the Hidden Bay Project in 2020. The Company completed desktop studies to refine exploration targets and submitted permit applications for several target areas on the Project in anticipation of the 2021 exploration program at the Uranium Nickel Sands target area, and the Dwyer Lake area.

#### **2021 Exploration Program**

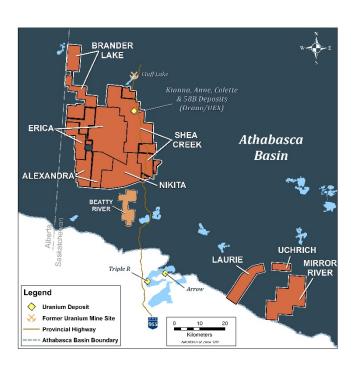

The 2021 winter exploration program included HLEM geophysics and diamond drilling in two target areas on the property. HLEM geophysics surveys totaling 73.1 line km were completed at the Dwyer Lake target and 22.4 km in the Uranium-Nickel Sands area. Six drill holes totalling 753 m were completed at Uranium-Nickel Sands which identified visible hydrothermal alteration bleaching and clay alteration typically found in close proximity to uranium mineralization. The Uranium-Nickel Sands target is a boulder-in-till anomaly discovered in the 1970's that has been defined over a 1,000 m long by 800 m wide kidney bean-shaped area and is comprised of highly anomalous uranium and nickel-bearing glacial boulders and sand believed to have been transported down-ice of an outcropping nickel-bearing uranium deposit by the movement of glaciers. The identification of indicative hydrothermal alteration and anomalous radioactivity in bedrock in the 2021 drill holes in the up-ice direction from the Uranium-Nickel Sands boulder anomaly will require additional drill testing by UEX in future drill programs.

The early onset of spring conditions precluded any drill evaluation of the Dwyer Lake targets to follow up the results of the winter HLEM program. Drill testing of the Dwyer Lake area will be a priority in future drill programs.

## Western Athabasca Projects ("WAJV") - Overview

The Western Athabasca Projects consist of eight separate joint ventures (the "WAJV Projects"). In 2004, UEX entered into an agreement with COGEMA Resources Inc. (now Orano) to fund \$30 million of exploration costs in exchange for a 49% interest in the Western Athabasca Projects, which includes Shea Creek. UEX successfully met its funding target and earned its 49% interest in 2007.

The Company increased its interest in the WAJV Projects by approximately 0.1% in 2013 by funding an additional \$2 million in expenditures (for further details on the original option agreement and additional expenditure agreement, please refer to the 2020 AIF on www.sedar.com).

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

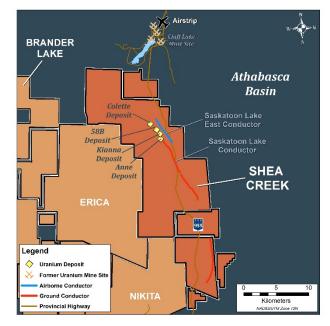

Western Athabasca Projects	Number of claims	Hectares	Acres	Project Operator	UEX Ownership %	Orano Ownership %

## Western Athabasca Projects - Shea Creek

The Shea Creek Project is one of the largest undeveloped uranium resource projects in the Athabasca Basin.

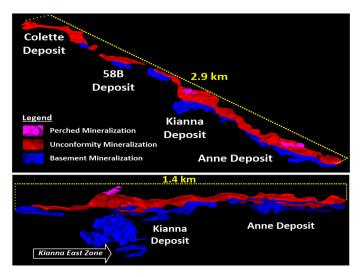

It is host to four known deposits:

- Kianna,
- Anne,
- Colette and
- 58B.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

These deposits are distributed along a 3 km strikelength at the north end of the 33 km long Saskatoon Lake Conductor ("SLC") and are open in almost every direction and have excellent potential for significant expansion. Three styles of mineralization have been observed at Shea Creek: unconformityhosted, basement-hosted and perched

UEX owns 49.0975% equity in the Shea Creek deposits.

#### **Mineral Resource Estimates**

A NI 43-101 independent mineral resource estimate for Shea Creek was prepared by James N. Gray, P.Geo. of Advantage Geoservices Limited in April 2013 (see UEX news release dated April 17, 2013). This estimate includes resources from the Kianna, Anne, Colette and 58B deposits based on drilling information up to December 31, 2012. The Shea Creek Technical Report, prepared by R.S. Eriks, P.Geo., J.N. Gray, P.Geo., D.A. Rhys, P.Geo. and S. Hasegawa, P.Geo. with an effective date of May 31, 2013 supporting this mineral resource estimate was filed on SEDAR on May 31, 2013. Details of the mineral resource estimate at a cut-off grade of  $0.30\% \ U_3O_8$  are as follows:

Deposit		Tonnes	Grade U <sub>3</sub> O <sub>8</sub> (%)	U₃O₅ (lbs)		Tonnes	Grade U <sub>3</sub> O <sub>8</sub> (%)	U₃O₅ (lbs)
Kianna		1,034,500	1.526	34,805,000	-	560,700	1.364	16,867,000
Anne		564,000	1.992	24,760,000		134,900	0.880	2,617,000
Colette	Indicated	327,800	0.786	5,680,000	Inferred	493,200	0.716	7,780,000
58B		141,600	0.774	2,417,000		83,400	0.505	928,000
TOTALS (1)(2)		2,067,900	1.484	67,663,000		1,272,200	1.005	28,192,000

<sup>(1)</sup> Certain amounts presented in the Shea Creek Technical Report have been rounded for presentation purposes. This rounding may impact the footing of certain amounts included in the tables above.

Mineral resources that are not mineral reserves do not have demonstrated economic viability. For additional information on the mineral resource estimate, please refer to the Shea Creek Technical Report as filed on SEDAR on May 31, 2013.

<sup>(2)</sup> The mineral resource estimates follow the requirements of NI 43-101 and classifications follow CIM definition standards.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

#### Shea Creek - 2020 & 2021 Exploration Program

Orano did not propose a program or budget for the Shea Creek Project in 2020 or 2021. UEX completed a detailed technical review of the Shea Creek Deposits with the objective of identifying opportunities to expand the footprint of the known deposits and to prioritize targets for drill testing in the immediate vicinity. This review led UEX to determine that several drill targets exist within the footprint of the current known deposits that have the potential to increase uranium resources significantly. This potential occurs dominantly within east-west trending basement-hosted structures beneath all four existing unconformity deposits, which is the same geological environment that hosts the Kianna Deposit. Basement-hosted mineralization at Kianna is higher-grade than most of the known Shea Creek Deposits and hosts over 50% of the known resources to date. Drill testing for discovery of additional high-grade basement-hosted uranium targets that host the Kianna Deposit have not been properly tested by the operator. Furthermore, there are existing drill holes in these target areas that encountered basement-hosted uranium that have not been tested in the down-dip direction. The review also suggested that the SHEA-2 area, located approximately 2 km south and along strike of the Shea Creek Deposits, remains a very high-priority target.

UEX presented the results of the technical review to Orano in May 2020. A dialogue with Orano to re-start exploration at Shea Creek to focus on the targets identified by the Company in 2019 and 2020 is ongoing at this time.

#### Western Athabasca Projects - Other Projects

#### 2020 Exploration Programs at Nikita and Alexandra

The Joint Venture partners approved exploration programs in 2020 at both Nikita and Alexandra. The approved 2020 exploration program at Nikita was \$3.55 million for 10 drill holes totaling 6,400 m and 42 line km of SQUID Moving Loop EM survey. The approved 2020 program at Alexandra was \$2 million for 4-5 diamond drill holes totaling 3,330 m and 34 line km of SQUID Moving Loop EM survey.

The 2020 winter program at Alexandra was 4 holes totalling 3,476 m testing grassroots exploration targets. Four other holes were abandoned or lost due to ground conditions. All four successfully completed holes did not explain the source of the electromagnetic conductor and did not encounter any significant alteration or radioactivity. Expenditures in 2020 on the Alexandra Project were \$1.6 million.

During the 2020 winter program at Nikita, a total of 4 holes totalling 3,143 m holes were completed testing grassroots targets on the Nikita Bridge and Nikita Creek Conductors. Two holes were abandoned or lost due to ground conditions. Weak alteration was encountered in some of the Nikita Bridge holes but several holes failed to explain the electromagnetic conductor and none of the holes encountered anomalous radioactivity.

Orano cancelled the proposed summer drilling program at the Nikita Project. Total 2020 exploration expenditures at Nikita were reduced from \$3.55 million to approximately \$1.8 million.

UEX has elected to dilute on the 2020 programs at Nikita and Alexandra.

#### **2021 Exploration Programs**

Orano notified UEX in early October 2020 that the Operator will not be proposing exploration programs and budgets in 2021 for any of the WAJV projects, but acknowledged that discussions regarding Shea Creek remain ongoing at this time.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

## **Beatty River Project**

	Number of claims	Hectares	Acres	Project Operator	UEX Ownership %	Orano Ownership %	JCU Ownership %
Beatty River	7	6,688	16,526	Orano	22.0444	56.5303	21.4253

The Beatty River Project is located in the western Athabasca Basin approximately 40 km south of the Shea Creek Deposits. Please see the Western Athabasca Projects map for the location of the Beatty River Project.

The last active program at Beatty River was the 2019 program that consisted of a 56.15 km SQUID MLEM geophysical survey covering four separate areas of the property.

UEX elected not to participate in the 2019 program at Beatty River. As a result, UEX's ownership interest in the Beatty River Project dropped to approximately 22.04% as of December 31, 2019. Orano has not proposed a budget and program for 2020 or 2021.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Black Lake Project**

	Number of claims	Hectares	Acres	Project Operator	UEX Ownership %	ALX Ownership %	Orano Ownership %
Black Lake	12	30,381	75,073	UEX	51.4260	40.0000	8.5740

On September 5, 2017, ALX and UEX entered into an Option Agreement. On June 20, 2018, ALX fulfilled Stage 1 of the Option Agreement and earned a 40% interest in the project by completing \$1,000,000 in exploration work on the project and issuing to UEX 5,000,000 common shares of ALX.

Effective March 6, 2020, UEX informed ALX that the terms of the Option Agreement with respect to the Stage 2 requirements had not been met and as a result, UEX had elected to terminate the Option Agreement and replaced it with the Joint Venture Agreement. ALX is no longer eligible to increase its interest in the Black Lake Project to 75% under the provision of the prior Option Agreement. Under the terms of the Joint Venture Agreement, if ALX chooses to not participate in future exploration programs, their ownership interest will be diluted accordingly.

#### 2020 and 2021 Exploration Programs

Due to budgetary constraints, neither ALX, Orano, or UEX have proposed exploration activities on the Black Lake Project in 2020 or 2021.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Other Projects**

	Number of claims	Hectares	Acres	UEX Ownership %
Uranium				
Christie West	2	329	813	100.00
Riou Lake	22	15,047	37,182	100.00
Cobalt				
Axis Lake	9	7,733	19,109	100.00
Key West	5	13,241	32,719	100.00
Base Metals				
George Lake	6	5,499	13,588	50.00

In April 2020, four claims at the Riou Lake project expired, and in early March 2020, all of the mineral claims comprising the Parry Lake and Laurie North projects expired as no assessment work had been filed for those claims to keep them in good standing. UEX had staked the claims on all three projects but due to the uranium industry environment, elected to engage the Company's limited financial resources on completing exploration activities on other higher priority projects.

In November 2019 and February 2020, UEX staked claims 37 km southeast of the Company's West Bear Project. The Company signed an LOI with Searchlight Resources to combine mineral assets into what is now being called the George Lake Joint Venture with each party owning a 50% interest.

In January 2020, UEX staked one small claim that was incorporated into the Company's Key West Project.

In June 2020, UEX re-staked some of the lands that expired in April 2020 on the Riou Lake Project. A total of eight claims covering 3,009 ha were acquired as part of the re-staking program.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Government Mineral Industry Relief**

On June 5, 2020, the Government of Saskatchewan announced amendments to *The Mineral Tenure Registry Regulations* that granted relief to mining companies in response to the COVID-19 pandemic. The objective to the amendments were to provide mining exploration companies more time to raise necessary capital and allow companies time to provide COVID-safe access to their exploration projects while protecting stakeholders and exploration employees. The amendments provide a waiver for exploration expenditure requirements for a period of 12 months from March 18, 2020 when the Province declared a State of Emergency. The waiver changes mineral claim lapsing dates by a minimum of 12 months without any additional exploration expenditures. This provides companies with essentially a 12-month exploration work holiday without the risk of mineral claims expiring. Thus, none of UEX's mineral claims will expire before the March 18, 2022, and all existing banked exploration assessment credits that will maintain current claims beyond that date will hold the claims in good standing for an additional 12 months.

#### **Qualified Person**

The disclosure of technical information regarding UEX's properties in this MD&A has been reviewed and approved by Roger Lemaitre, P.Eng., P.Geo., UEX's President and CEO, who is a Qualified Person as defined by NI 43-101 and is non-independent of UEX.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

## 3. Financial Update

#### **Selected Financial Information**

The following is selected financial data from the audited consolidated financial statements of UEX for the last three completed fiscal years. The data should be read in conjunction with the audited consolidated financial statements for the years ended December 31, 2020 and 2019 and the notes thereto. Certain comparative period amounts have been reclassified to conform with the current year's presentation.

#### **Summary of Annual Financial Results**

	Decem	ber 31, 2020	December 31, 2019		
Interest income	\$	42,398	\$	126,975	
Net loss for the year		(3,630,630)		(9,123,734)	
Write-off of mineral property acquisition costs		(2,505)		(9,151)	
Basic and diluted loss per share		(0.009)		(0.023)	
Exploration and evaluation expense		2,169,945		7,682,875	
Capitalized acquisition costs		3,978		17,888	
Total assets		19,085,279		15,295,954	
Total non-current liabilities	\$	113,681	\$	170,722	

The following quarterly financial data is derived from the unaudited condensed interim consolidated financial statements of UEX as at and for the three-month periods indicated below.

#### **Summary of Quarterly Financial Results (Unaudited)**

	2021 Quarter 3	2021 Quarter 2	2021 Quarter 1	2020 Quarter 4	2020 Quarter 3	2020 Quarter 2	2020 Quarter 1	2019 Quarter 4
Interest income	\$ 3,801	\$ 4,322	\$ 8,957	\$ 10,831	\$ 10,037	\$ 9,048	\$ 12,482	\$ 15,255
Management fees	9,500	-	-	-	-	-	-	-
Net loss for the period	(1,188,670)	(903,070)	(1,696,315)	(673,907)	(870,984)	(765,292)	(1,320,447)	(1,430,841)
Write-off of mineral property acquisition costs	-	-	-	-	-	-	(2,505)	(9,151)
Basic and diluted loss per share	(0.002)	(0.002)	(0.004)	(0.002)	(0.002)	(0.002)	(0.003)	(0.004)
Exploration and evaluation expense	570,902	337,043	1,273,667	354,950	623,700	243,612	947,683	967,406
Capitalized mineral property acquisition costs	-	-	1,578	-	-	3,378	600	3,241
Total assets	37,766,603	17,764,740	18,047,121	19,085,279	14,094,035	14,783,898	13,473,277	15,295,954
Total non-current liabilities	76,259	88,951	101,424	113,681	125,726	137,562	149,194	170,722

UEX's business is not affected by seasonality as the Company is able to perform exploration and evaluation work year-round. Variations in exploration and evaluation expenditures from quarter to quarter and year to year are affected by the timing and size of the exploration and evaluation programs in the periods. In 2021, UEX is focusing its exploration efforts on the Christie Lake, Hidden Bay and West Bear Cobalt-Nickel Projects.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### Renunciation of tax benefits:

- o Approximately \$3.78 million of flow-through expenditure from the December 2020 private share placement were renounced to eligible shareholders in February 2021 effective December 31, 2020. Approximately \$23,006 of flow-through expenditures were incurred by December 31, 2020, and \$1,789,837 of flow-through expenditures were incurred during the nine months ended September 30, 2021, for a total of \$1,812,843. The remaining \$1,967,317 of flow-through expenditures are expected to be incurred during the remainder of 2021 and into 2022.
- Approximately \$1.6 million of flow-through expenditures from the November 2019 private share placement were renounced to eligible shareholders in February 2020 effective December 31, 2019.
   Approximately \$11,687 of flow-through expenditures were incurred by December 31, 2019 and the remaining \$1.58 million of flow-through expenditures were incurred during the remainder of 2020.

#### **Share Capital**

The Company is authorized to issue an unlimited number of common shares without par value, and an unlimited number of preferred shares (no par value) issuable in series of which 1,000,000 preferred shares have been designated Series 1 Preferred Shares, none of which are issued and outstanding.

- 532,826,995 and 537,376,741 common shares were issued and outstanding as at September 30, 2021 and November 3, 2021, respectively;
- 28,575,000 and 27,575,000 common shares related to director, employee and consultant share purchase options were reserved by the Company as at September 30, 2021 and November 3, 2021, respectively. As at September 30, 2021, the share purchase options are exercisable into common shares at exercise prices ranging from \$0.125 per share to \$0.60 per share.
- 693,478 common shares related to director, employee and consultants restricted share units (RSUs) were reserved by the Company as at September 30, 2021 and November 3, 2021.
- As the number of share purchase options and RSUs outstanding at November 3, 2021 is 27,575,000 and 693,478 respectively, (representing 5.13% and 0.13% respectively, of the Company's current issued and outstanding common shares), the number of share purchase options and RSUs available for grant as of November 3, 2021 is 25,469,196 (representing 4.74% of the Company's current issued and outstanding common shares).
- For the nine-month period ended September 30, 2021, 4,410,000 share purchase options were exercised regularly with a weighted average exercise price of \$0.22 for gross proceeds of \$978,250. No share purchase options were exercised for the nine-month period ended September 30, 2020.
- On February 27, 2020, 15,999,994 share purchase warrants with an exercise price of \$0.42 per share expired unexercised. On May 20, 2020, 6,250,000 share purchase warrants with an exercise price of \$0.21 per share were issued in connection with the May 2020 private placement. On December 2, 2020, 9,249,332 share purchase warrant with an exercise price of \$0.18 per share and 2,581,631 broker warrants with an exercise price of \$0.13 per share were issued in connection with the December 2020 private placement. On September 7, 2021, 36,475,000 share purchase warrants with an exercise price of \$0.40 per share and 4,377,000 brokers warrants with an exercise price of \$0.29 were issued in connection with the September 2021 private placement.
- For the nine-month period ended September 30, 2021, 3,281,375 warrants were exercised regularly with a weighted average exercise price of \$0.21 for gross proceeds of \$673,466. No warrants were exercised for the nine-month period ended September 30, 2020.
- 55,651,588 and 52,101,842 share purchase warrants were outstanding as at September 30, 2021 and November 3, 2021, respectively

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### Results of Operations for the Three-Month Period Ended September 30, 2021

For the three-month period ended September 30, 2021, the Company earned interest income on short-term deposits of \$3,801 (2020 - \$9,761) and recorded interest income of \$nil (2020 - \$276) in reference to the lease receivable on the sub-lease of office premises, which expired in October 2020. The decrease in interest income was primarily due to a decline in interest rates despite higher monthly average cash balance invested over the period. In the third quarter of 2021, the Company had an average cash balance invested of approximately \$5.3 million versus \$2.8 million in the comparative period. The Company also received management fees of \$9,500 (2020 - \$nil) from JCU.

For the three-month period ended September 30, 2021, the Company incurred expenses of \$898,899 (2020 - \$881,021) with significant changes from the comparative period identified as follows:

- Exploration and evaluation expenditures of \$570,902 (Q3 2020 \$623,700) were higher in the current period. During Q3 2021, the Company completed a 1,574m drill program at Christie Lake while in Q3 2020 the Company completed a \$0.5M drill program at Christie Lake and refined targets at the Hidden Bay and West Bear Projects.
- Legal and audit expense recovery of (\$147,470) (Q3 2020 \$20,932) includes costs which were incurred
  in Q1 and Q2 of 2021 related to the JCU acquisition, which were reclassified in Q3 2021 to the investment
  in equity-accounted investee.
- Office expenses of \$3,046 (Q3 2020 \$64,898) decreased due to reclassifying consulting and advisory fees which related to the JCU acquisition and were incurred in Q1 and Q2 of 2021, and were reclassified in Q3 2021 to the investment in equity-accounted investee.
- Travel and promotion expenses of \$43,954 (Q3 2020 \$4,044) increased due to timing differences in recording fees associated with marketing and IR services.
- The vesting of share purchase options during the three-month period ended September 30, 2021 resulted in total share-based compensation of \$349,599 (Q3 2020 \$85,678), of which \$53,809 was allocated to exploration and evaluation expenditures (Q3 2020 \$15,267) and the remaining \$295,790 was expensed to share-based compensation (Q3 2020 \$70,411). Share-based compensation expense also includes the estimated fair value expense of the RSUs of \$27,081. The higher share-based compensation expense is due primarily to stock options and RSUs being granted to employees, officers, and directors in Q3 2021, compared to the comparative period where no stock options and RSUs were granted in the quarter.

Share of loss from equity-accounted investee of \$303,072 (Q3 2020 - \$nil) increased due to the acquisition of JCU and how UEX accounts for the Company's 50% share of loss from JCU upon consolidation.

#### Results of Operations for the Nine-Month Period Ended September 30, 2021

For the nine-month period ended September 30, 2021, the Company earned interest income on short-term deposits of \$17,080 (2020 - \$29,932) and recorded interest income of \$nil (2020 - \$1,635) in reference to the lease receivable on the sub-lease of office premises, which expired in October 2020. The decrease in interest income was primarily due to the lower average interest rates in 2021 compared to 2020, despite have a higher average amount invested of approximately \$5.9 million vs \$2.7 million in the comparative period. The Company also received management fees of \$9,500 (2020 - \$nil) from JCU.

For the nine-month period ended September 30, 2021, the Company incurred expenses of \$3,514,063 (2020 - \$3,051,822) with significant changes from the comparative period as follows:

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

- Exploration and evaluation expenditures of \$2,181,612 (2020 \$1,814,995) were higher in the current period. In 2021, the Company completed a 3-hole drill program at Christie Lake, a 19-hole drill program at West Bear, a geophysics program on both West Bear and Hidden Bay, a 6-hole drill program and core mapping program at Hidden Bay, and a prospecting and sampling program at Axis Lake. In 2020, the Company completed a 13-hole drill program at West Bear and a fixed-loop electromagnetic survey at Christie Lake prior to a 4-hole drill program in the summer of 2020.
- Legal and audit expenses of \$216,276 (2020 \$110,760) increased due to additional legal and audit
  expenses related to the Denison transaction and additional auditing and advisory expenses. In addition,
  legal and audit expenses incurred in Q1 and Q2 of 2021 were reclassified in Q3 2021 to the investment
  in equity-accounted investee.
- Office expenses, net of project surcharges, were \$172,357 (2020 \$193,724) and lower than the previous year's office expenses due to slight increase in project surcharges in 2021 compared to 2020 due to a larger exploration program in 2021.
- Gross salaries of \$537,338 (2020 \$614,274) decreased due to an employee being on leave for the first half of 2021. Salaries, net of project management fees and Canadian Emergency Wage Subsidy program ("CEWS"), of \$156,882 (2020 - \$196,249) decreased due to lower gross salaries in the current period offset by CEWS being lower as subsidy rates have decreased in 2021 compared to 2020.
- The vesting of share purchase options during the nine-month period ended September 30, 2021 resulted in total share-based compensation of \$489,909 (2020 \$464,587), of which \$65,790 was allocated to exploration and evaluation expenditures (2020 \$55,589) and the remaining \$424,119 was expensed to share-based compensation (2020 \$409,998). Share-based compensation expense also includes the estimated fair value expense of the RSUs of \$27,081. The higher share-based compensation expense is due primarily to fluctuations in share price at grant date, interest rate, share price volatility and life of options.

Share of loss from equity-accounted investee of \$303,072 (Q3 2020 - \$nil) increased due to the acquisition of JCU on August 3, 2021 and how UEX accounts for the Company's 50% share of loss from JCU upon consolidation.

The following table outlines cumulative exploration and evaluation expenditures on projects, cumulatively as at and for the nine-month period ended September 30, 2021 and 2020.

	2020							2021			
Project		Cumulative <sup>(1)</sup> to mber 31, 2019	Expenditures in the period		Cumulative to September 30 2020	Dece	Cumulative to ember 31, 2020		xpenditures n the period		mulative to tember 30, 2021
Beatty River	\$	876,877	\$ 18	34 \$	\$ 877,061	\$	877,061	\$	-	\$	877,061
Black Lake		14,490,256		-	14,490,256		14,498,484		-		14,498,484
Christie Lake		13,132,095	897,30	06	14,029,401		14,111,375		464,600		14,575,975

<sup>(1)</sup> Exploration and evaluation expenditures have been presented on a cumulative basis from July 17, 2002.

<sup>&</sup>lt;sup>(2)</sup> Other projects include: Axis Lake, Christie West, George Lake, Key West and Riou Lake.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

Exploration and evaluation expenditures for the three and nine-month period ended September 30, 2021 and 2020 include the following expenditures:

		Three months ended September 30				Nine months ended September 30		
	2021		2020		2021		2020	
Depreciation	\$ 13,479	\$	8,108	\$	39,840	\$	33,133	
Share-based compensation (Note 13 (c))	53,809		15,267		65,790		55,589	
Project management fee (Note 17)	57,307		52,897		147,457		150,259	
Project surcharge (Note 18)	31,125		22,563		94,450		77,518	
	\$ 155,720	\$	98,835	\$	347,537	\$	316,499	

For further information regarding expenditures on the projects shown in the table above, please refer to *Exploration and Evaluation Activities*. Also please refer to the *Critical Accounting Estimates, Valuation of mineral properties* section.

The Company has an interest in several joint operations relating to the exploration and evaluation of various properties in the western, eastern and northern Athabasca Basin. These interests are governed by contractual arrangements but have not been organized into separate legal entities or vehicles. The joint arrangements that the Company is party to in some cases entitle the Company, or its joint venture partner, to a right of first refusal on the projects should one of the partners choose to sell their interest. The joint arrangements are governed by management committees which set the annual exploration budgets for these projects. Should the Company be unable to, or choose not to, fund its required contributions as outlined in the agreements, there is a risk that the Company's ownership interest could be diluted. As a result of decisions to fund exploration programs for the joint arrangements, the Company may choose to complete further equity issuances or fund these amounts through the Company's general working capital. For further information on joint operations and ownership interests, please refer to the *Exploration and Evaluation Activities* section.

#### **Financing Activities**

As UEX has not begun production on any of its mineral properties, the Company does not generate cash from operations and has historically funded its operations through monies raised in the public equity markets:

 On September 7, 2021, the Company completed a private placement of 72,950,000 units at a price of \$0.29 per unit, for gross proceeds of \$21,155,500. Each unit consisted of one common share and onehalf share purchase warrant. Each whole warrant entitles the holder to acquire one common share at an exercise price of \$0.40 until September 7, 2024.

Total share issuance costs of \$2,802,557 included agents' cash commissions of \$1,269,330 equal to 6% of the gross proceeds of the financing, other issuance costs of \$246,882 and the fair value of the broker warrants of \$1,286,345. The agents received 4,377,000 broker warrants equal to 6% of the total number of units sold. Each broker warrant is exercisable for a common share of the Company until September 7, 2024 at a price of \$0.29 per common share. The weighted average assumptions used for the Black-Scholes valuation of the warrants were annualized volatility of 72.35%, risk-free interest rate of 0.49%, expected life of 3.0 years and a dividend rate of Nil.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

• On December 2, 2020, the Company completed a private placement of 18,498,665 units at a price of \$0.12 per unit and 27,001,144 flow-through common shares at a price of \$0.14 per common share, for gross proceeds of \$6,000,000. Each unit consisted of one common share and one-half share purchase warrant. Each whole warrant entitles the holder to acquire one common share at an exercise price of \$0.18 until June 2, 2023. Total share issuance costs of \$706,319 included agents' cash commissions of \$341,040 equal to 6% of the gross proceeds of the financing, other issuance cost of \$178,710 and the fair value of the broker warrants of \$186,569. The agents received 2,581,631 broker warrants equal to 6% of the total number of units and flow-through shares sold. Each broker warrant is exercisable for a common share of the Company until June 2, 2023 at a price of \$0.13 per common share. The weighted average assumptions used for the Black-Scholes valuation of the warrants were annualized volatility of 63.32%, risk-free interest rate of 0.29%, expected life of 2.5 years and a dividend rate of Nil.

No commission was paid nor brokers' warrants issued on a portion of the financing made to president's list subscribers. As the market price of the Company's common shares on the date of issuance exceeded the flow-through issuance price, no flow-through share premium liability was recorded in 2020.

The proposed use of proceeds from the December 2, 2020 flow-through private placement is presented in the table below:

	PROPOSED USE O	F PROCEEDS		ACTUAL US	E OF PROCE	FDS	
	Flow-through Pri	vate Placement	Use	of Proceeds	Remainin	g to be Spent	
Christie Lake Project	\$	2,000,000	\$	361,685	\$	1,638,315	
West Bear Project		580,160		821,784		(241,624)	
Hidden Bay Project		1,200,000		515,574		684,426	
Western Athabasca		-		-		-	
Other Projects				113,800		(113,800)	
TOTAL	\$	3,780,160	\$	1,812,843	\$	1,967,317	

The Company renounced the income tax benefits of the December 2, 2020 private placement to its subscribers effective December 31, 2020 and will incur Part XII.6 tax at a rate of Nil% for January 2021 and 2% from February to June 2021 and 1% from July to December 2021 on unspent amounts. For the nine-month period ended September 30, 2021, the Company incurred \$27,260 of Part XII.6 tax (2020 - \$8,517).

- On May 20, 2020, the Company completed a private placement of 12,500,000 units at a price of \$0.16 per unit, for gross proceeds of \$2,000,000. Each unit consists of one common share and one-half share purchase warrant. Each whole warrant entitles the holder to acquire one common share at an exercise price of \$0.21 until May 20, 2023. Share issuance costs totaled \$138,647, inclusive of agent commissions of \$67,140.
- The remaining non-flow-through funds at September 30, 2021 of \$2,721,621 will be used for general and administrative expenses for 2021 and beyond.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Liquidity and Capital Resources**

Working capital as at September 30, 2021 was \$4,130,492 compared to working capital of \$7,115,905 as at December 31, 2020 and includes the following:

- Current assets as at September 30, 2021 and December 31, 2020 were \$5,001,540 and \$7,417,083 respectively, including:
  - Cash and cash equivalents of \$4,688,938 at September 30, 2021 and \$7,213,551 at December 31, 2020. The Company's cash balances are invested in highly liquid term deposits redeemable within 90 days or less and savings accounts.
- Current liabilities as at September 30, 2021 and December 31, 2020 were \$871,048 and \$301,178, respectively, including:
  - Accounts payable and other liabilities of \$821,582 at September 30, 2021 and \$254,569 at December 31, 2020.

The Company has sufficient financial resources for exploration, evaluation, and administrative costs for the next twelve months. The Company may require additional financing and although it has been successful in the past, there is no assurance that it will be able to obtain adequate financing in the future or that such financing will be available on acceptable terms.

On March 11, 2020 the COVID-19 outbreak was declared a pandemic by the World Health Organization. The situation remains dynamic and the ultimate duration and magnitude of the impact on the economy and capital markets are not known at this time.

The Company purchased an exploration camp for the Christie Lake Project for \$162,844 during 2020. There were no other significant capital expenditures for the year ended December 31, 2020. The Company has incurred \$39,078 related to repairs and maintenance on the Horseshoe-Raven camp in Q3 of 2021, of which \$26,870 has been capitalized and \$12,208 has been expensed under exploration and evaluation expenditures. An additional estimate of \$17,000 is expected to be incurred to complete the Horseshoe-Raven camp repairs in Q4 of 2021. No other capital expenditures are planned for 2021.

#### **Equity-Accounted Investee**

On August 3, 2021, the Company acquired 100% of the shares of JCU from Overseas Uranium Resources Development Co., Ltd. for \$41.0 million. On August 3, 2021, the Company sold 50% of the JCU shares to Denison Mines Corp. ("Denison") for \$20.5 million. Prior to the transaction, on August 3, 2021, the Company and Denison entered into a three-month, interest-free, Term Loan for \$40.95 million to facilitate the Company's purchase of 100% of the shares of JCU, \$20.5 million of which was retired upon the Company transferring 50% of the JCU shares to Denison. The remaining \$20.45 million of the Term Loan was repaid on September 17, 2021.

The Company's participation in JCU is a joint venture, therefore the Company accounts for the joint venture on an equity basis.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

The consideration for the asset acquisition of JCU on August 3, 2021 (100% basis) was allocated to the assets and liabilities as follows:

Cash and cash equivalents	\$ 5,823,808
Other current assets	1,619
Non-current assets	35,355,252
Current liabilities	(180,679)
Non-current liabilities	-
	\$ 41,000,000

JCU is a private Canadian company engaged in the exploration and development of uranium assets in Canada. It has partnerships and interests in 12 uranium exploration and development projects in the Athabasca Basin and Nunavut, including ownership interests in Denison's Wheeler River Project (10.0%), Cameco's Millennium Project (33.1%), Orano's Kiggavik Project (33.8%), and UEX's Christie Lake Project (34.5%).

The following tables summarize the financial information of JCU and reconciles the summarized financial information to the carrying amount of UEX's interest in JCU:

	September 30 2021 (100% basis)	UEX's non- ownership interest (50%)	Consolidating adjustments (1)	Carrying amount in the statement of financial position
Cash and cash equivalents	\$ 5,643,128	(2,821,564)	-	2,821,564
Other current assets	5,971	(2,985)	-	2,986
Non-current assets	21,822,854	(10,911,427)	7,570,956	18,482,383
Current liabilities	(610,496)	305,248	-	(305,248)
Non-current liabilities	(34,459,959)	17,229,979	17,229,980	-
Total	\$ (7,598,502)	3,799,251	24,800,936	21,001,685

<sup>(1)</sup> The Company records certain consolidating adjustments to allocate the purchase price and acquisition costs, eliminate unrealized profit, and align accounting treatment of mineral property exploration and evaluation costs.

A summary of the investment in JCU is as follows:

	Number of shares	Value		
Balance, December 31, 2020	- \$	-		
Purchase of 100% of JCU shares	69,663	41,000,000		
Sale of 50% of JCU shares	(34,831)	(20,500,000)		
Acquisition costs	-	660,469		
Share of equity loss	-	(303,072)		
	-	144,288		
Balance, September 30, 2021	34,832 \$	21,001,685		

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

A summary of UEX's share of loss from JCU is as follows:

	For the period from August 3, 2021 to September 30. 2021
Interest income	\$ 1,574
Net loss	(75,290
Consolidating adjustments (1)	(530,854
	(606,144
UEX's 50% share of net loss	(303,072

A summary of UEX's loans and borrowings is as follow:

Balance at January 1, 2021	Ca	rrying amount			
	\$	-			
New issue –Term loan <sup>(1)</sup>		40,950,000			
Repayment – Cash settled (1)		(20,450,000)			
Repayment – Non-cash settled (1)		(20,500,000)			
Balance at September 30, 2021	\$	-			

 $<sup>^{(1)}</sup>$  See Note 9 of the financial statements for details of Term Loan

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Lease Liability**

The Company has an obligation under lease for its Saskatoon office which expires in February 2024. The obligation for its Vancouver office expired in October 2020.

	September 30 2021	December 31 2020		
Current	\$ 49,466	\$ 46,609		
Non-current	76,259	113,681		
	\$ 125,725	\$ 160,290		

The following table presents the contractual undiscounted cash flows for lease obligations as at September 30, 2021:

	September 30 2021
2021	\$ 14,175
2022	56,700
2023 and beyond	66,150

Interest expense on lease obligations for the three-month period ended September 30, 2021 was \$2,338 (2020 - \$3,391). Total cash outflow for leases was \$14,175 (2020 - \$29,608), including \$11,837 of principal payments on lease liabilities (2020 - \$26,216).

Interest expense on lease obligations for the nine-month period ended September 30, 2021 was \$7,623 (2020 - \$11,528). Total cash outflow for leases was \$42,188 (2020 - \$88,823), including \$34,565 of principal payments on lease liabilities (2020 - \$77,295).

#### **Off-Balance Sheet Arrangements**

The Company does not have any off-balance sheet arrangements.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

#### **Financial Instruments**

The Company's financial instruments consist of cash and cash equivalents, amounts receivable, deposits, investments and accounts payable and other liabilities. Interest income is recorded in the statement of operations and comprehensive loss. Cash and cash equivalents, as well as amounts receivable and deposits, are classified as financial assets at amortized cost, and accounts payable and other liabilities are classified as financial liabilities recorded at amortized cost using the effective interest rate method. The investments also include shares which have been classified as *financial assets at Fair Value in Other Comprehensive Income* ("FVOCI") and are carried at fair value with changes in fair value recognized in other comprehensive income.

The Company operates entirely in Canada and is not subject to any significant foreign currency risk. The Company's financial instruments are exposed to limited liquidity risk, credit risk and market risk.

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company manages liquidity risk through the management of its capital structure. The Company's objective when managing capital is to safeguard the Company's ability to continue as a going concern in order to pursue the exploration and development programs on its mineral properties. The Company manages its capital structure, consisting of shareholders' equity, and makes adjustments to it, based on funds available to the Company, in order to support the exploration and development of its mineral properties. Historically, the Company has relied exclusively on the issuance of common shares for its capital requirements. Accounts payable and other liabilities are due within the current operating period.

Credit risk is the risk of an unexpected loss if a third party to a financial instrument fails to meet its contractual obligations. The Company's exposure to credit risk includes cash and cash equivalents, amounts receivable, and deposits. The Company reduces its credit risk by maintaining its bank accounts at large international financial institutions. The maximum exposure to credit risk is equal to the carrying value of cash and cash equivalents, amounts receivable, and deposits. The Company's investment policy is to invest its cash in highly liquid short-term interest-bearing investments that are redeemable 90 days or less from the original date of acquisition.

Market risk is the risk that changes in market prices such as foreign exchange rates and interest rates will affect the Company's income. The Company is subject to interest rate risk on its cash and cash equivalents. The Company reduces this risk by investing its cash in highly liquid short-term interest-bearing investments that earn interest on a fixed rate basis.

All financial instruments measured at fair value are categorized into one of three hierarchy levels, described below, for disclosure purposes. Each level is based on the transparency of the inputs used to measure the fair values of assets and liabilities:

- •Level 1 Values based on unadjusted quoted prices in active markets that are accessible at the measurement date for identical assets or liabilities;
- Level 2 Values based on quoted prices in markets that are not active or model inputs that are observable either directly or indirectly for substantially the full term of the asset or liability; and
- •Level 3 Values based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement.

The carrying values of cash and cash equivalents, amounts receivable, deposits, and accounts payable and other liabilities are a reasonable estimate of their fair values because of the short period to maturity of these instruments.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

The following table summarizes those assets and liabilities carried at fair value:

Investments – as at December 31, 2020	Level 1		Level 2		L	evel 3	Total		
Shares – Vanadian (TSX-V: VEC)	\$	4,375	\$	-	\$	-	\$	4,375	
Shares – ALX (TSX-V: AL)		400,000		-		-		400,000	
	\$	404,375	\$	-	\$	-	\$	404,375	

Investments – as at September 30, 2021	Level 1		Level 2		L	evel 3	Total		
Shares – Vanadian (TSX-V: VEC)	\$	8,312	\$	-	\$	-	\$	8,312	
Shares – ALX (TSX-V: AL)	į	525,000		-		-	į	525,000	
	\$ !	533,312	\$	-	\$	-	\$ 5	533,312	

The following table shows a reconciliation from the beginning balances to ending balances for Level 1 fair value measurements for investments:

	Number of Shares	Change in Fair Value		Fair Value		
Balance, December 31, 2019	5,087,500			\$	225,875	
Gains (losses) for the three months ended March 31, 2020		\$	(74,562)			
Gains (losses) for the three months ended June 30, 2020			27,625			
Gains (losses) for the three months ended September 30, 2020			201,750			
Gains (losses) for the three months ended December 31, 2020			23,687			
Changes in fair value – total unrealized gain (loss) on financial assets at FVOCI (shares) – year ended December 31, 2020		\$	178,500		178,500	
Balance, December 31, 2020	5,087,500			\$	404,375	
Gains (losses) for the three months ended March 31, 2021		\$	27,188			
Gains (losses) for the three months ended June 30, 2021			437			
Gains (losses) for the three months ended September 30, 2021			101,312			
Changes in fair value – total unrealized gain (loss) on financial assets at FVOCI (shares) – period ended September 30, 2021		\$	128,937		128,937	
Balance, September 30, 2021	5,087,500			\$	533,312	

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

### **Related Party Transactions**

The Company was involved in the following related party transactions for the periods ended September 30, 2021 and 2020. Related party transactions include the following payments which were made to related parties other than key management personnel:

	Three months ended September 30			Nine months ended September 30			
	2021		2020		2021		2020
Cameco group of companies (1)	\$ -	\$	2,308	\$	622	\$	3,363
Management advisory board share-based payments (2)	18,469		6,750		23,283		9,339
	\$ 18,469	\$	9,058	\$	23,905	\$	12,702

<sup>(1)</sup> Payments related to fees paid for equipment repairs.

Related party transactions include the following recoveries of expenditures which were received from parties other than key management personnel:

	Three months ended September 30			Nine months ended September 30			
	2021		2020		2021		2020
JCU (Canada) Exploration Company Ltd <sup>(3)</sup>	\$ 156,497	\$	-	\$	156,497	\$	-
	\$ 156,497	\$	-	\$	156,497	\$	-

<sup>(3)</sup> JCU is 50% owned by UEX; receipts and receivables above reflect the UEX owned portion of recoveries. Recoveries of expenditures relate to JCU's participation in the Christie Lake joint venture, recovery of administrative costs associated with acquisition of JCU, and fees related to the management of JCU.

Key management personnel compensation includes management and director compensation as follows:

	Three months ended September 30			Nine months ended September 30			
	2021		2020		2021		2020
Salaries and short-term employee benefits (1)(2)(5)	\$ 310,791	\$	109,183	\$	593,625	\$	331,509
Share-based payments (3)	106,527		63,784		217,361		358,352
Other compensation (1)(4)	53,164		54,716		158,433		166,862
	\$ 470,482	\$	227,683	\$	969,419	\$	856,723

<sup>(1)</sup> In the event of a change of control of the Company, certain senior management may elect to terminate their employment agreements and the Company shall pay termination benefits of up to two times their respective annual salaries at that time and all of their share purchase options will become immediately vested with all other employee benefits, if any, continuing for a period of up to two years.

<sup>(2)</sup> Share-based compensation expense is the fair value of options granted which have been calculated using the Black-Scholes option-pricing model and the assumptions disclosed in Note 13(c) of the financial statements.

<sup>(2)</sup> In the event that Mr. Lemaitre's (UEX's President and CEO) employment is terminated by the Company for any reason other than as a result of a change of control, death or termination for cause, the Company will pay a termination amount equal to one year's base salary plus any bonus owing. All other employee-related benefits will continue for a period of one year following such termination. Mr. Lemaitre may also terminate the employment agreement upon three months' written notice to the Board and receive a lump sum payment equal to his base salary plus benefits for three months.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

- (3) Share-based compensation expense is the fair value of options granted which have been calculated using the Black-Scholes option-pricing model and the assumptions disclosed in Note 13(c) of the financial statements.
- (4) Represents payments to Evelyn Abbott for CFO services rendered to UEX. In the event that Ms. Abbott's consulting agreement is terminated by the Company for any reason other than as a result of a change of control, death or termination for cause, the Company will pay a termination amount equal to one year's base fee plus any bonus owing. Ms. Abbott may also terminate the consulting agreement upon two months' written notice to the Board.
- (5) Salaries and short-term employee benefits disclosed are gross amounts paid and does not include the reduction for the Canadian Emergency Wage Subsidy (Note 21 of the financial statements).

#### **Government Assistance**

In response to the negative economic impact of COVID-19, the Government of Canada announced the CEWS program in April 2020. CEWS provides a wage subsidy on eligible remuneration to eligible employers based on certain criteria.

During the period ended September 30, 2021, the Company assessed its eligibility related to CEWS and determined it has qualified for this subsidy from the January 1, 2021 through to September 25, 2021. It has accordingly applied for and received \$211,981 for the period ended August 28, 2021 (2020 - \$201,591 for the period ended August 1, 2020), and has applied for additional periods ended September 25, 2021 and recorded a receivable of \$21,018 for the period August 29, 2021 through to September 25, 2021 (2020 - \$66,175 for the period August 2, 2020 through to September 26, 2020) (Note 4). This subsidy has been recorded as a reduction to the eligible remuneration expense incurred by the Company during this period. Government assistance related to an expense has been recognized as a reduction of related expense for which the grant is intended to compensate. The Company intends to apply for the CEWS in subsequent application periods, subject to continuing to meet the applicable qualification criteria.

Exploration and evaluation salaries for the period that have been compensated by the CEWS have been excluded as flow-through eligible expenditures.

### **Accounting Policies**

The accounting policies and methods employed by the Company determine how it reports its financial condition and results of operations and may require management to make judgments or rely on assumptions about matters that are inherently uncertain. The Company's results of operations are reported using policies and methods in accordance with IFRS. In preparing consolidated financial statements in accordance with IFRS, management is required to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses for the period. Management reviews its estimates and assumptions on an ongoing basis using the most current information available.

### **Joint Arrangements**

Joint arrangements are arrangements of which the Company has joint control, established by contracts requiring unanimous consent for decisions about the activities that significantly affect the arrangements' returns. They are classified and accounted for as follows:

- (i) Joint operation when the Company has rights to the assets, and obligations for the liabilities, relating to an arrangement, it accounts for each of its assets, liabilities and transactions, including its share of those held or incurred jointly, in relation to the joint operation.
- (ii) Joint venture when the Company has rights only to the net assets of the arrangement, it accounts for its interest using the equity method.

The Company has an interest in several joint operations relating to the exploration and evaluation of various properties in the Athabasca Basin. The consolidated financial statements include the Company's proportionate share of the joint operations' assets, liabilities, revenue and expenses with items of a similar nature on a line-by-line basis from the date that the joint operation commences until the date that the joint operation ceases. These

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

interests are governed by contractual arrangements but have not been organized into separate legal entities or vehicles.

"Joint operations" as defined by IFRS are commonly referred to as "joint ventures" by UEX, its operating partners and the general mining industry, and use of the term "joint venture" by UEX in its disclosures for the purposes of describing its operating results is considered consistent with these statements.

The Company has classified its shareholders' agreement in JCU as a joint venture and accounts for its interest using the equity method.

The joint arrangements that the Company is party to in some cases entitle the Company to a right of first refusal on the projects should one of the partners choose to sell their interest. The joint arrangements are governed by a management committee which sets the annual exploration budgets for these projects. In certain cases, should the Company choose not to fund the minimum required contributions as outlined in the agreement, there is a risk that the Company's ownership interest could be diluted. As a result of decisions to fund exploration programs for the joint arrangements, the Company may choose to complete further equity issuances or fund these amounts through the Company's general working capital.

### **Critical Accounting Estimates**

The Company prepares its consolidated financial statements in accordance with IFRS, which require management to estimate various matters that are inherently uncertain as of the date of the consolidated financial statements. Accounting estimates are deemed critical when a different estimate could have reasonably been used or where changes in the estimate are reasonably likely to occur from period to period and would materially impact the Company's consolidated financial statements. The Company's significant accounting policies are discussed in the consolidated financial statements. Critical estimates inherent in these accounting policies are discussed below.

#### **Environmental Rehabilitation Provision**

The Company recognizes the fair value of a liability for environmental rehabilitation in the period in which the Company is legally or constructively required to remediate, if a reasonable estimate of fair value can be made, based on an estimated future cash settlement of the environmental rehabilitation obligation, discounted at a pre-tax rate that reflects the current market assessments of the time value of money and the risks specific to the obligation. The environmental rehabilitation obligation is capitalized as part of the carrying amount of the associated long-lived asset and a liability is recorded. The environmental rehabilitation cost is amortized on the same basis as the related asset. The liability is adjusted for the accretion of the discounted obligation and any changes in the amount or timing of the underlying future cash flows. Significant judgements and estimates are involved in forming expectations of the amounts and timing of environmental rehabilitation cash flows. The Company has assessed each of its mineral projects and determined that no material environmental rehabilitations exist as the disturbance to date is minimal.

#### Share-based Payments

For equity settled plans, the fair value is estimated using the Black-Scholes option-pricing model at the grant date and amortized over the vesting periods. Upon exercise, consideration received on the exercise of share purchase options is recorded as share capital and the related share-based payments reserve is reclassified into share capital. The amount recognized as an expense is adjusted to reflect the number of awards expected to vest. Awards issued under these plans that are forfeited before vesting are reversed from share-based payments reserve. For those that expire or are forfeited after vesting, the amount previously recorded in share-based payments reserve is transferred to deficit.

For cash settled plans, the fair value is based on the Company's stock price on the date of grant. The fair value of the amount payable is recognized as stock-based compensation expense, with a corresponding increase in accrued liabilities over the vesting period. The liability is re-measured at each reporting date and at settlement date. Any changes in fair value of the liability are recognized as stock-based compensation expense.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

An individual is classified as an employee when the individual is an employee for legal or tax purposes (direct employee) or provides services similar to those performed by a direct employee, including directors of the Company. Share-based payments to non-employees are measured at the fair value of the goods or services received or the fair value of the equity instruments issued if it is determined the fair value of the goods or services cannot be reliably measured and are recorded at the date the goods or services are received.

#### Valuation of Warrants

The Company has adopted the residual value method with respect to the measurement of shares and warrants issued as part of units. The residual value method first allocates value to common shares issued in the private placements at their fair value, as determined by the closing quoted bid price on the announcement date or the price protection date, if applicable. The balance remaining, if any, is allocated to the warrants with the fair value recorded in shareholders' equity under warrant reserve.

### **Equipment**

The Company uses assumptions to estimate the useful lives of property, plant and equipment for determining appropriate depreciation rates.

### New Standards not yet adopted

There are no new standards not yet adopted that are expected to have a material impact on the Company's financial statements.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

### 4. Risks and Uncertainties

The following factors are those which are the most applicable to the Company. The discussion which follows is not inclusive of all potential risks. Risk management is an ongoing exercise upon which the Company spends a substantial amount of time. While it is not possible to eliminate all risks inherent to the mining business, the Company strives to manage these risks, to the greatest extent possible, to ensure that its assets are protected.

### Risks of exploration programs not resulting in profitable commercial mining operations

The successful exploration and development of mineral properties is speculative. Such activities are subject to a number of uncertainties, which even a combination of careful evaluation, experience and knowledge may not eliminate. Most exploration projects do not result in the discovery of commercially mineable deposits. There is no certainty that the expenditures made or to be made by UEX in the exploration and development of its mineral properties or properties in which it has an interest will result in the discovery of uranium, cobalt or other mineralized materials in commercial quantities. While discovery of a uranium or cobalt deposit may result in substantial rewards, few properties that are explored are ultimately developed into producing mines. Major expenses may be required to establish reserves by drilling and to construct mining and processing facilities at a site. There is no assurance that the current exploration programs of UEX will result in profitable commercial uranium or cobalt mining operations. UEX may abandon an exploration project because of poor results or because UEX feels that it cannot economically mine the mineralization.

#### Joint arrangements

UEX directly participates in certain of its projects through joint operations with third parties (such as the WAJV Projects, Christie Lake and Black Lake) and through UEX's joint venture with Denison (through UEX's 50% ownership in JCU). UEX has other joint operations and may enter into more joint arrangements in the future. There are risks associated with joint arrangements, including:

- disagreement with a joint arrangement partner (a "partner") about how to develop, operate or finance a project:
- a partner not complying with an agreement;
- possible litigation between partners about joint arrangement matters; and
- limited control over decisions related to a joint arrangement operation in which UEX does not have a controlling interest.

In particular, UEX is in the process of negotiating agreements with Orano on the WAJV Projects and there is no assurance that the parties will be able to conclude a mutually satisfactory agreement.

### Reliance on other companies as operators

Where another company is the operator and majority owner of a property in which UEX has an interest, UEX is and will be, to a certain extent, dependent on that company for the nature and timing of activities related to those properties and may be unable to direct or control such activities.

### **Uranium price fluctuations**

The market price of uranium is the most significant market risk for companies exploring for and producing uranium. The marketability of uranium is subject to numerous factors beyond the control of UEX. The price of uranium has recently experienced and may continue to experience volatile and significant price movements over short periods of time. Factors impacting price include demand for nuclear power, political and economic conditions in uranium producing and consuming countries, natural disasters such as those that struck Japan in March 2011, reprocessing of spent fuel and the re-enrichment of depleted uranium tails or waste, sales of excess civilian and military inventories (including from the dismantling of nuclear weapons) by governments and industry participants.

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

production levels and costs of production in regions such as Kazakhstan, Russia, Africa and Australia, and potential for changes to uranium markets due to government policies such as uranium import quotas or tariffs.

#### Cobalt price fluctuations

The market price of cobalt is the most significant market risk for companies exploring for and producing cobalt. The marketability of cobalt is subject to numerous factors beyond the control of UEX. The price of cobalt has recently experienced and may continue to experience volatile and significant price movements over short periods of time. Factors impacting price include demand for electrical vehicles, political and economic conditions in cobalt producing (particularly the Democratic Republic of Congo) and consuming countries, various government programs incentivizing electrical vehicle sales and government legislation governing carbon emissions particularly with respect to the automobile industry.

#### Reliance on the economics of the Horseshoe-Raven Technical Report

The market price of  $U_3O_8$  has decreased since the date of the Horseshoe-Raven Technical Report. The uranium industry has been adversely affected by the natural disasters that struck Japan on March 11, 2011 and the resulting damage to the Fukushima nuclear facility. These events resulted in many countries, which presently rely on nuclear power for a portion of their electrical generation, stating that they will review their commitment to this source of clean energy. These reviews resulted in downward pressure on the price of uranium and may have a significant effect on the country-by-country demand for uranium. The long-term  $U_3O_8$  market price, as reported by Trade Tech on October 29, 2021, is US\$45.00/lb. Given that the Horseshoe-Raven Technical Report presented three economic scenarios using prices ranging from US\$60 to US\$80/lb of  $U_3O_8$ , the economic analysis which uses  $U_3O_8$  prices higher than the prevailing market price may no longer be accurate and readers of the Horseshoe-Raven Technical Report are therefore cautioned when reading or relying on this Report.

#### Competition for properties could adversely affect UEX

The international uranium and cobalt industries are highly competitive and significant competition exists for the limited supply of mineral lands available for acquisition. Many participants in the mining business include large, established companies with long operating histories. UEX may be at a disadvantage in acquiring new properties as many mining companies have greater financial resources and more technical staff. Accordingly, there can be no assurance that UEX will be able to compete successfully to acquire new properties or that any such acquired assets would yield reserves or result in commercial mining operations.

#### Resource estimates are based on interpretation and assumptions

Mineral resource estimates presented in this document and in UEX's filings with securities regulatory authorities, news releases and other public statements that may be made from time to time are based upon estimates. These estimates are imprecise and depend upon geological interpretation and statistical inferences drawn from drilling and sampling analysis, which may prove to be unreliable. There can be no assurance that these estimates will be accurate or that this mineralization could be extracted or processed profitably.

Mineral resource estimates for UEX's properties may require adjustments or downward revisions based upon further exploration or development work, actual production experience, or future changes in the price of uranium or cobalt. In addition, the grade of mineralization ultimately mined, if any, may differ from that indicated by drilling results. There can be no assurance that minerals recovered in small-scale tests will be duplicated in large-scale tests under on-site conditions or in production scale.

#### Requirement for financing

There are no revenues from operations and no assurances that sufficient funding will be available to conduct further exploration and development of its projects or to fund exploration expenditures under the terms of any joint-venture or option agreements after that time. If the Company's exploration and development programs are successful, additional funds will be required for development of one or more projects. Failure to obtain additional

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

funding could result in the delay or indefinite postponement of further exploration and development or the possible loss of the Company's properties or a reduction of interest in other joint venture projects. It is intended that such funding will be obtained primarily from future equity issues. If additional funds are raised from the issuance of equity or equity-linked securities, the percentage ownership of the current shareholders of UEX will be reduced, and the newly issued securities may have rights, preferences or privileges senior to or equal to those of the existing holders of UEX's common shares. The ability of UEX to raise the additional capital and the cost of such capital will depend upon market conditions from time to time. There can be no assurances that such funds will be available at reasonable cost or at all. Failure to obtain additional financing on a timely basis could cause UEX to reduce or render it unable to earn interests in its properties.

### Competition from other energy sources and public acceptance of nuclear energy

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydro-electricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Lower prices of oil, natural gas, coal, hydro-electricity and subsidized renewable energies may result in lower demand for uranium concentrate and uranium conversion services. Furthermore, the growth of the uranium and nuclear power industry beyond its current level will depend upon continued and increased acceptance of nuclear technology as a means of generating carbon-free electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks which could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry.

#### Dependence on key management employees

UEX's development to date has depended, and in the future will continue to depend, on the efforts of key management employees. UEX will need additional financial, administrative, technical and operations staff to fill key positions as the business grows. If UEX cannot attract and train qualified people, the Company's growth could be restricted.

#### Environmental and other regulatory laws, regulations and permits

Mining and refining operations and exploration activities, particularly uranium mining, refining and conversion in Canada, are subject to extensive regulation by provincial, municipal and federal governments. Such regulations relate to production, development, exploration, exports, taxes and royalties, labour standards, occupational health, waste disposal, protection and remediation of the environment, mines decommissioning and reclamation, mine safety, toxic substances and other matters. Compliance with such laws and regulations has increased the costs of exploring, drilling, developing and constructing. It is possible that, in the future, the costs, delays and other effects associated with such laws and regulations may impact UEX's decision to proceed with exploration or development or that such laws or regulations may result in UEX incurring significant costs to remediate or decommission properties which do not comply with applicable environmental standards at such time. UEX believes it is in substantial compliance with all material laws and regulations that currently apply to its operations. However, there can be no assurance that all permits which UEX may require for the conduct of uranium exploration operations will be obtainable or can be maintained on reasonable terms or that such laws and regulations would not have an adverse effect on any uranium exploration project which UEX might undertake. World-wide demand for uranium is directly tied to the demand for electricity produced by the nuclear power industry, which is also subject to extensive government regulation and policies.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions. These actions may result in orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or remedial actions. Companies engaged in uranium exploration operations may be required to compensate others who suffer loss or damage by reason of such activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

### Relationships with communities

The Company's relationships with the communities in which the Company operates are critical to ensuring the future success of existing operations and the construction and development of future projects. There is an increasing level of public interest worldwide relating to the perceived effect of mining activities on the environment and on communities impacted by such activities. Certain non-governmental organizations ("NGOs"), some of which oppose globalization and resource development, are often vocal critics and attempt to interfere with the mining industry and its practices, including the use of cyanide and other hazardous substances in processing activities. Adverse publicity generated by such NGOs or others related to extractive industries generally, or their operations specifically, could have an adverse effect on the Company's reputation or financial condition and may impact the Company's relationship with the communities in which it operates. While the Company believes that it operates in a socially responsible manner, there is no guarantee that the Company's efforts in this respect will mitigate this potential risk.

### Activities of the Company may be impacted by the spread of COVID-19

The Company's business could be significantly adversely affected by the effects of a widespread global outbreak of contagious disease, including the recent outbreak of respiratory illness caused by a novel coronavirus ("COVID-19"). The Company cannot accurately predict the impact COVID-19 will have on third parties' ability to meet their obligations with the Company, including due to uncertainties relating to the ultimate geographic spread of the virus, the severity of the disease, the duration of the outbreak, and the length of travel and quarantine restrictions imposed by governments of affected countries. In addition, a significant outbreak of contagious diseases in the human population could result in a widespread health crisis that could adversely affect the economies and financial markets of many countries (including those in which the Company operates), resulting in an economic downturn that could negatively impact the Company's operating results and ability to raise capital.

#### Conflicts of interest

Some of the directors of UEX are also directors of other companies that are similarly engaged in the business of acquiring, exploring and developing natural resource properties. Such associations may give rise to conflicts of interest from time to time. In particular, one of those consequences may be that corporate opportunities presented to a director of UEX may be offered to another company or companies with which the director is associated, and may not be presented or made available to UEX. The directors of UEX are required by law to act honestly and in good faith with a view to the best interests of UEX, to disclose any interest which they may have in any project or opportunity of UEX, and to abstain from voting on such a matter. Conflicts of interest that arise will be subject to and governed by procedures prescribed in the Company's by-laws and Code of Ethics and by the *Canada Business Corporations Act*.

### Internal controls

Internal controls over financial reporting are procedures designed to provide reasonable assurance that transactions are properly authorized, assets are safeguarded against unauthorized or improper use, and transactions are properly recorded and reported. A control system, no matter how well designed and operated, can provide only reasonable, not absolute, assurance with respect to the reliability of financial reporting and financial statement preparation.

#### Market price of shares

Securities of mining companies have experienced substantial volatility in the past often based on factors unrelated to the financial performance or prospects of the companies involved. These factors include macroeconomic conditions in North America and globally, and market perceptions of the attractiveness of particular industries. The price of UEX's securities is also likely to be significantly affected by short-term changes in uranium or other commodity prices, currency exchange fluctuation, or in its financial condition or results of operations as reflected in its periodic reports. Other factors unrelated to the performance of UEX that may have an effect on the price of

Management's Discussion and Analysis
For the nine months ended September 30, 2021 and 2020
(Expressed in Canadian dollars, unless otherwise noted)

the securities of UEX include trading volume and general market interest in UEX's securities which may affect an investor's ability to trade significant numbers of securities of UEX. If an active market for the securities of UEX does not continue, the liquidity of an investor's investment may be limited, the price of the securities of the Company may decline and investors may lose their entire investment in the Company. As a result of any of these factors, the market price of the securities of UEX at any given point in time may not accurately reflect the long-term value of UEX.

#### Risks relating to Liability Insurance Coverage

The nature of the risks UEX faces in the conduct of its operations are such that liabilities could exceed policy limits in any insurance policy or could be excluded from coverage under an insurance policy. The potential costs that could be associated with any liabilities not covered by insurance or in excess of insurance coverage or compliance with applicable laws and regulations may cause substantial delays and require significant capital outlays, adversely affecting UEX's financial position.

#### No Mineral Production

The Company does not have an interest in a producing mineral property. There is no assurance that commercial quantities of minerals will be discovered at any Company property, nor is there any assurance that any future exploration programs of the Company on any of its properties will yield any positive results. Even where potentially commercial quantities of minerals are discovered, there can be no assurance that any property of the Company will ever be brought to a stage where mineral reserves can be profitably produced thereon. Factors which may limit the ability of the Company to produce mineral resources from its properties include, but are not limited to, the price of mineral resources, availability of additional capital and financing and the nature of any mineral deposits.

#### Changes in Climate Conditions

A number of governments have introduced or are moving to introduce climate change legislation and treaties at the international, national, state/provincial and local levels. Regulation relating to emission levels (such as carbon taxes) and energy efficiency is becoming more stringent. If the current regulatory trend continues, this may result in increased costs at some or all of the Company's operations. In addition, the physical risks of climate change may also have an adverse effect on the Company's operations. Extreme weather events have the potential to disrupt operations at the Company's properties and may require the Company to make additional expenditures to mitigate the impact of such events.

#### Information Systems and Cyber Security

The Company's operations depend, in part, upon information technology systems. The Company's information technology systems are subject to disruption, damage or failure from a number of sources, including, but not limited to, hacking, computer viruses, security breaches, natural disasters, power loss, vandalism, theft and defects in design. Any of these and other events could result in information technology systems failures, operational delays, production downtimes, destruction or corruption of data, security breaches or other manipulation or improper use of our data, systems and networks, any of which could have adverse effects on the Company's reputation, business, results of operations, financial condition and share price.

The Company's risk and exposure to these matters cannot be fully mitigated because of, among other things, the evolving nature of these threats. As a result, cyber security and the continued development and enhancement of controls, processes and practices designed to protect the Company's systems, computers, software, data and networks from attack, damage or unauthorized access remain a priority. As cyber threats continue to evolve, the Company may be required to expend additional resources to continue to modify or enhance protective measures or to investigate and remediate any security vulnerabilities.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

### 5. Disclosure Controls and Procedures

The Company has established disclosure controls and procedures to ensure that information disclosed in this MD&A and the related unaudited consolidated interim financial statements was properly recorded, processed, summarized and reported to the Company's Board and Audit Committee.

The Company's certifying officers conducted or caused to be conducted under their supervision an evaluation of the disclosure controls and procedures as required under applicable Canadian securities laws as at December 31, 2020. Based on the evaluation, the Company's certifying officers concluded that the disclosure controls and procedures were effective to provide a reasonable level of assurance that information required to be disclosed by the Company in its annual filings and other reports that it files or submits under applicable Canadian securities laws is recorded, processed, summarized and reported within the time period specified and that such information is accumulated and communicated to the Company's management, including the certifying officers, as appropriate to allow for timely decisions regarding required disclosure.

It should be noted that while the Company's certifying officers believe that the Company's disclosure controls and procedures provide a reasonable level of assurance and that they are effective, they do not expect that the disclosure controls and procedures will prevent all errors and fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

## 6. Internal Controls over Financial Reporting

The Company's certifying officers acknowledge that they are responsible for designing internal controls over financial reporting or causing them to be designed under their supervision in order to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with IFRS.

Based upon the 2013 COSO Framework, the Company's certifying officers evaluated or caused to be evaluated under their supervision the effectiveness of the Company's internal controls over financial reporting. Based upon this assessment, management concluded that as at December 31, 2020 the Company's internal control over financial reporting was effective to provide reasonable assurance regarding the preparation of the Company's financial statements in accordance with IFRS.

The internal controls over financial reporting were designed to ensure that testing and reliance could be achieved. Management and the Board of Directors work to mitigate the risk of material misstatement in financial reporting; however, there can be no assurance that this risk can be reduced to less than a remote likelihood of material misstatement.

There were no changes in these controls during the most recent interim period ending September 30, 2021 that materially affected, or are reasonably likely to materially affect, such controls.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

## 7. Cautionary Statement Regarding Forward-Looking Information

This MD&A contains "forward-looking statements" within the meaning of applicable Canadian securities legislation. Such forward-looking statements include statements regarding the outlook for our future operations, plans and timing for the commencement or advancement of exploration activities on our properties, joint arrangements and option earn in arrangements, UEX's 50% ownership of JCU, statements about future market conditions, supply and demand conditions, forecasts of future costs and expenditures, and other expectations, intention and plans that are not historical fact. These forward-looking statements are based on certain factors and assumptions, including expected economic conditions, uranium prices, results of operations, performance and business prospects and opportunities.

Statements concerning mineral reserve and mineral resource estimates may also constitute forward-looking statements to the extent that they involve estimates of the mineralization that will be encountered if the property is developed and, in the case of mineral reserves, such statements reflect the conclusion based on certain assumptions that the mineral deposit can be economically exploited.

Forward-looking statements are subject to a variety of known and unknown risks, uncertainties and other factors which could cause actual events or results to differ from those expressed or implied by the forward-looking statements, including, without limitation:

- UEX's exploration activities may not result in profitable commercial mining operations;
- risks associated with UEX's participation in joint ventures and ability to earn into joint venture and option arrangements;
- risks related to UEX's reliance on other companies as operators;
- risks related to uranium, cobalt, and nickel price fluctuations;
- the economic analysis contained in the 2011 technical report on UEX's Horseshoe-Raven project may no longer be accurate or reliable as prevailing uranium prices are lower than those used in the report;
- risks associated with competition for mineral properties from mining companies which have greater financial resources and more technical staff;
- risks related to mineral reserve and mineral resource figures being estimates based on interpretations and assumptions which may prove to be unreliable;
- uncertainty in UEX's ability to raise financing and fund the exploration and development of its mineral properties which could cause UEX to reduce or be unable to earn interests in properties;
- uncertainty in competition from other energy sources and public acceptance of nuclear energy;
- risks related to dependence on key management employees;
- risks related to compliance with environmental laws and regulations which may increase costs of doing business and restrict our operations;
- risks related to officers and directors becoming associated with other natural resource companies which may give rise to conflicts of interests:
- risks related to accounting policies requiring UEX management to make estimates and assumptions that affect reported amounts of financial items;
- risks related to UEX's internal control systems providing reasonable, but not absolute, assurance on the reliability of its financial reporting;
- risks related to UEX's ability to access its exploration projects or disruptions to its business due to internal or government guidelines, legislation or other restrictions due to the COVID-19 pandemic;
- risks related to UEX's 50% ownership in JCU, including the reliability of historic resource estimates on JCU's mineral properties;
- risks related to the market price of UEX's shares; and
- potential costs which could be associated with any liabilities not covered by insurance or in excess of insurance coverage.

Management's Discussion and Analysis For the nine months ended September 30, 2021 and 2020 (Expressed in Canadian dollars, unless otherwise noted)

This list is not exhaustive of the factors that may affect our forward-looking statements. Reference should also be made to factors described under "Risk Factors" in UEX's latest Annual Information Form filed on www.sedar.com. Should one or more of these risks and uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in the forward-looking statements. UEX's forward-looking statements are based on beliefs, expectations and opinions of management on the date the statements are made. For the reasons set forth above, investors should not place undue reliance on forward-looking statements.
